The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users, and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects, theory, applications, and tools of computer and information science, and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best papers from those papers accepted for presentation at the workshop. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 15 of the most promising papers are then published in this Springer SCI book and not the conference proceedings. We impatiently await the important contributions that we know these authors will bring to the field of computer and information science. *Government Reports Announcements & Index*, 1996 **Modern Game Testing: A Pragmatic Guide to Test Planning and Strategy** Chris Howell, 2022-08-31 Focusing exclusively on the unique challenges of video game testing, you'll discover how modern game companies create test plans and strategies for large and complex games and learn the foolproof techniques and processes created for and used by real-world game teams.
