Stessel,2012-12-06 Solid waste is one of the newest fields to achieve recognition as a sub discipline in environmental engineering As such one is hard pressed to find thorough coverage of related topics in academic curricula Many graduate programs in environmental engineering have one introductory course in waste control A handful of texts some excellent exist to serve this need Recent purported crises in solid waste management have forced the understanding that something beyond the traditional control methods may be appropriate Resource recovery is the correct nomenclature for the longest standing alternative approach seeking to extract materials from the waste stream for eventual re use in one or another beneficial fashion Several books have evolved covering various approaches Design approaches therein have borrowed heavily from other disciplines ceasing where solid waste differs from the feeds to be processed These books were oriented towards knowledgeable practitioners This work attempts to present waste processing as a study in unit operations appropriate to university study at the graduate level The study of unit operations is typical in environmental engineering These unit operations are different A variety of student backgrounds are suitable However a familiarity with the basics of waste control such as would be gained from one of the introductory courses mentioned above is assumed as is a sound quantitative background It is hoped that this work fills an empty niche Contents 1 Waste as a Resource 1 *Unit Operations in Resource Recovery Engineering* Duke University,1978* **Materials Recovery from Municipal Waste** Harvey Alter,1983 *Design Principles in Resource Recovery Engineering* Norman L. Technology⁶ Physical Technology⁷ Radiation and Electrical Technology⁸ Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies
