Convergence Tetsuya Kawanishi,2024-10-02 This handbook provides comprehensive knowledge on device and system
 technologies for seamlessly integrated networks of various types of transmission media such as optical fibers and millimeter
 and THz waves to offer super high speed data link service everywhere The seamless integration of the knowledge of radio
 and optical technologies is needed to construct wired and wireless seamless networks High frequency bands such as
 millimeter wave and THz wave bands where super wideband spectra are available can offer high speed data transmission and
 high resolution sensing However the expected coverage is limited due to large wave propagation loss Thus convergence of
 radio and optical links is indispensable to construct worldwide networks The radio and optical technologies share the same
 physics and are closely related to each other but have been developed independently Therefore there is a big gap between
 these two fields Bridging the two fields this handbook is also intended as a common platform to design integrated networks
 consisting of wireless and wired links Full coverage of wireless and wired convergence fields ranging from basics of device
 and transmission media to applications allows the reader to efficiently access all the important references in this single
