Specification Of Software Systems:

Specification of Software Systems Vangalur S. Alagar, K. Periyasamy, 1998 This book provides an introduction to program specification illustrating the advantages it confers upon the software development process Covering all three major specification languages Larch VDM and Z the book discusses specification in general the abstraction process the mathematical tools required the main formal methods as well as examples of their use *Software Specification Methods* Marc Frappier, Henri Habrias, 2012-12-06 Objectives of this Book This book is an introduction to a set of software specification methods Its targeted audience are readers who do not wish to read pages of definitions in order to understand the basics of a method The same case study is used to introduce each method following a rigorously uniform presentation format Special care has been devoted to ensure that specifications do not deviate from the case study text As much as the method allows what is specified is what appears in the case study text The benefits are two fold First the reader can easily switch from one method to another using his knowledge of the case study as a leverage to understand a new method Second it becomes easier to compare methods because the same behavior is specified in each case Each method presentation follows the same pattern The concepts are progressively introduced when they are needed To illustrate the specification process questions that the specifier should raise during the analysis of the case study are stated Answers are provided as if they were given by an imaginary client The question answer process guides the derivation of the specification Interestingly the questions raised depend on the method which is illustrative of the differences between them *Software Requirements Analysis and Specifications* Jag Sodhi, 1992 Including examples and case studies throughout this book explains the important features of understanding analyzing and managing a customer's requirements for building a quality cost effective software engineering system It provides a comparative study of various requirements analysis methods and CASE tools

Specification for Visual Requirements of Work-Centered Software Systems, 2006 Work centered software systems function as inherent work aiding systems Based on the design concept for a work centered support system WCSS these software systems support user tasks and goals through both direct and indirect aiding methods within the interface client In order to ensure the coherent development and delivery of work centered software products WCSS visual requirements must be specified to capture the cognitive aspects of the user interface design A work centered specification language based on the User Interface Markup Language UIML is an effective solution to bridging this gap between cognitive systems engineering and software engineering A visual requirements specification language can capture and describe work centered visual requirements within a semi formal syntax The proposed language can also be easily integrated into a UML object model via the use of UML's extensibility features A specification language for visual requirements could be employed by cognitive engineers and design teams to help convey requirements in a comprehensible format that is suitable for a software engineer Such a solution provides coherency in the software modeling process of developing work centered software systems

Software Systems Specification and Modeling John Mathenge Kanyaru, 2013-02-15 Drawing on the author's industrial experience in software development this book explores system specification and validation It describes the discipline of software requirements engineering along with issues to consider when choosing a specification technique or notation It covers the differences between requirements analysis and construction specification and explains methods for translating specifications into designs The text also describes different approaches to software specification including visual and textual methods It offers many illustrative examples to reinforce concepts and provide clarity PowerPoint slides and solutions manual are available upon qualified course adoption

Software Specification and Design Ph.D., John C. Munson, 2005-09-26 The rigors of engineering must soon be applied to the software development process or the complexities of new systems will initiate the collapse of companies that attempt to produce them Software Specification and Design An Engineering Approach offers a foundation for rigorously engineered software It provides a clear vision of what occurs at e

Handbook of Smart Energy Systems Michel Fathi, Enrico Zio, Panos M. Pardalos, 2023-08-04 This handbook analyzes and develops methods and models to optimize solutions for energy access for industry and the general world population alike in terms of reliability and sustainability With a focus on improving the performance of energy systems it brings together state of the art research on reliability enhancement intelligent development simulation and optimization as well as sustainable development of energy systems It helps energy stakeholders and professionals learn the methodologies needed to improve the reliability of energy supply and demand systems achieve more efficient long term operations deal with uncertainties in energy systems and reduce energy emissions Highlighting novel models and their applications from leading experts in this important area this book will appeal to researchers students and engineers in the various domains of smart energy systems and encourage them to pursue research and development in this exciting and highly relevant field

Textbook on Management Information Systems DP Nagpal, 2011 This book has been written for non technical undergraduates BCA MCA MBA students in finance accounting management and the liberal arts who will find a knowledge of Information System vital for their professional success This book may also serve as a first course for students who subsequently major in information systems at either the undergraduate or graduate level

Requirements Engineering for Sociotechnical Systems, 2005-01-01 This book provides a detailed account concerning information society and the challenges and application posed by its elicitation specification validation and management from embedded software in cars to internet based applications COTS packages health care and others Provided by publisher

Computer-based Problem Solving Process Teodor Rus, 2015-03-19 One side effect of having made great leaps in computing over the last few decades is the resulting over abundance in software tools created to solve the diverse problems Problem solving with computers has in consequence become more demanding instead of focusing on the problem when conceptualizing strategies to solve them users are side tracked by the pursuit of even more programming tools as available Computer Based Problem Solving Process is a work

intended to offer a systematic treatment to the theory and practice of designing implementing and using software tools during the problem solving process This method is obtained by enabling computer systems to be more Intuitive with human logic rather than machine logic Instead of software dedicated to computer experts the author advocates an approach dedicated to computer users in general This approach does not require users to have an advanced computer education though it does advocate a deeper education of the computer user in his or her problem domain logic This book is intended for system software teachers designers and implementers of various aspects of system software as well as readers who have made computers a part of their day today problem solving

Advancing Practical Specification Techniques for Modern Software Systems John L. Singleton,2018 The pervasive nature of software and the tendency for it to contain errors has long been a concern of theoretical computer scientists Many investigators have endeavored to produce theories tools and techniques for verifying the behavior of software systems One of the most promising lines of research is that of formal specification which is a subset of the larger field of formal methods In formal specification one composes a precise mathematical description of a software system and uses tools and techniques to ensure that the software that has been written conforms to this specification Examples of such systems are Z notation the Java Modeling Language and many others However a fundamental problem that plagues this line of research is that the specifications themselves are often costly to produce and difficult to reuse If the field of formal specification is to advance we must develop sound techniques for reducing the cost of producing and reusing software specifications The work presented in this dissertation lays out a path to producing sophisticated automated tools for inferring large complex code bases tools for allowing engineers to share and reuse specifications and specification languages for specifying information flow policies that can be written separately from program code This dissertation introduces three main lines of research First I discuss a system that facilitates the authoring sharing and reuse of software specifications Next I discuss a technique which aims to reduce the cost of producing specifications by automatically inferring them Finally I discuss a specification language called Evidently which aims to make information flow security policies easier to write maintain and enforce by untangling them from the code to which they are applied
