System Theory:

System Theories and A Priori Aspects of Perception J.S. Jordan, 1998-04-21 This book takes as a starting point John Dewey's article *The Reflex Arc Concept in Psychology* in which Dewey was calling for in short the utilisation of systems theories within psychology theories of behaviour that capture its nature as a vastly complex dynamic coordination of nested coordinations This line of research was neglected as American psychology migrated towards behaviourism where perception came to be thought of as being both a neural response to an external stimulus and a mediating neural stimulus leading to or causing a muscular response As such perception becomes a question of how it is the perceiver creates neural representations of the physical world Gestalt psychology on the other hand focused on perception itself utilising the term *Phenomenological Field* a term that elegantly nests perception and the organism within their respective as well as relative levels of organisation With the development of servo mechanisms during the second world war systems theory began to take on momentum within psychology and then in the 1970s William T Powers brought the notion of servo control to perception in his book *Behavior: The Control of Perception* Since then scientists have come to see nature not as linear chain of contingent cause effect relationships but rather as a non linear unpredictable nesting of self referential emergent coordinations best described as Chaos theory The implications for perception are astounding while maintaining the double aspect nature of perception espoused by the Gestalt psychologists In short system theories model perception within the context of a functioning organism so that objects of experience come to be seen as scale dependent psychophysically neutral phenomenological transformations of energy structures the dynamics of which are the result of evolution and therefore a priori to the individual case This a priori homological unity among brain perception and world is revealed through the use of systems theories and represents the thrust of this book All the authors are applying some sort of systems theory to the psychology of perception However unlike Dewey we have close to a century of technology we can bring to bear upon the issue This book should be seen as a collection of such efforts

Liberating Systems Theory Robert L.
