T Cell Receptor Genes:

The T Cell Receptor FactsBook Marie-Paule Lefranc, Gerard Lefranc, 2001-07-13 The T Cell Receptor FactsBook contains entries on all the 176 functional variable diversity joining and constant regions of the human T cell receptor including alpha beta gamma and delta loci Introductory chapters summarize information of T cell receptor chain synthesis chromosomal location and an overview of the human T cell receptor loci *The T-Cell Receptors* Tak W. Mak, 2012-12-06 The importance of thymus dependent cells or T cells in the generation of a successful immune response was first realized in the early sixties In the following two decades a succession of elegant experiments established the antigen specificity of T cells and their ability to perform both as regulatory and effector cells T cells were shown to be essential in most immune reactions playing a crucial role in augmenting the activity of effector T and B cells against foreign antigen as well as in the suppression of effector activity against self antigens The means by which T cells differentiate foreign from self antigens is based on their recognition of antigen almost exclusively in the context of self major histocompatibility complex products unlike B cells which recognize an antigen alone It is this recognition mediated by the T cell receptor that sets into motion the diverse cell cell interactions which control the differentiation and regulation of the immune response Although its importance was well established the molecular nature of the T cell receptor remained elusive for two decades Many hypotheses as to its structure and precise function were put forward using immunoglobulin as a basis for conjecture but the Holy Grail of Immunology remained ephemeral until three years ago In the ensuing years both immunologists and molecular biologists have contributed to an explosion of data unsurpassed by any previous period in the field Kuby Immunology Thomas J. Kindt, Richard A. Goldsby, Barbara A. Osborne, Janis Kuby, 2007 Originally authored by the award winning author Janis Kuby Immunology remains the best selling textbook for the undergraduate course The first and only true textbook written by professors who teach the undergraduate course it presents the most current concepts in an experimental context with clinical advances highlighted in boxes supported by the kind of helpful pedagogical tools that other books do not provide

Owen, Dr. Elizabeth Simpson, 1995 T cell receptor genes covers biochemical functional and genetic aspects of this key family of immunological molecules It should be essential reading for all those interested in the TCR and its function in health and disease It deals with the TCR protein its functional interactions with the signal transduction machinery of the T cell and with the structure and organization of the TCR genes It is the only comprehensive volume on the TCR and is written by leaders in the field Particularly useful is the tabulation and nomenclature of all the known TCR alpha and beta variable regions *Influence of the T Cell Receptor Genes, the Major Histocompatibility Type, and the Sex of the Mouse on Susceptibility to Theiler's Murine Encephalomyelitis Virus (TMEV)-induced Demyelinating Disease* Catherine Ann Kappel, 1991 Biomedical Index to PHS-supported Research: pt.
