SQL Structured Query Language is the programming language that we use to communicate with databases Through this language we can store data in a database and then change it delete it and retrieve it It's a powerful tool that virtually every company in the world relies on in some way

**What is SQL** SQL stands for Structured Query Language and can be pronounced as SQL or sequel Structured English Query Language

**Defined SQL** is a query language used for accessing and modifying information in one or more data tables and rows of a database

**SQL Database Design** IBM first developed SQL in 1970s Also it is an ANSI ISO standard It has become a Standard Universal Language used by most of the relational database management systems RDBMS

Some of the RDBMS systems are Oracle Microsoft SQL server Sybase etc Most of these have provided their own implementation extensions thus enhancing their RDBMS system features and making it a powerful tool

These RDBMS systems all use the popular SQL commands SELECT UPDATE DELETE INSERT WHERE in similar format

**SQL Database Table** SQL database is constructed of a number of tables

In a business SQL tables would be used to divide and simplify the different areas of the operation

**Table for Customers** one for Vendors Employees and so on

**SQL Database Table Columns** Each SQL table is made up of a number of columns referred to as fields and run along the top of the table

Sql columns or fields have their content object data info defined into character types such as text date numeric integer length to name a few

**SQL Database Table Rows** Each SQL table row referred to a record is located in the left column of the table

Sql record row will contain a string of data containing data matching up to each column field across the top

So in a Customer table each customer record would consist of one row with data for the customer ID number customer name address phone email and so on
