## The Truth On Modeling:

**The Truth on Modeling** Erin Pinckney, 2000 Biomimicry for Optimization, Control, and Automation Kevin M. Passino, 2005-09-08 Biomimicry uses our scientific understanding of biological systems to exploit ideas from nature in order to construct some technology In this book we focus on how to use biomimicry of the functional operation of the hardware and software of biological systems for the development of optimization algorithms and feedback control systems that extend our capabilities to implement sophisticated levels of automation The primary focus is not on the modeling emulation or analysis of some biological system The focus is on using bio inspiration to inject new ideas techniques and perspective into the engineering of complex automation systems There are many biological processes that at some level of abstraction can be represented as optimization processes many of which have as a basic purpose automatic control decision making or automation For instance at the level of everyday experience we can view the actions of a human operator of some process e.g the driver of a car as being a series of the best choices he or she makes in trying to achieve some goal staying on the road emulation of this decision making process amounts to modeling a type of biological optimization and decision making process and implementation of the resulting algorithm results in human mimicry for automation There are clearer examples of biological optimization processes that are used for control and automation when you consider nonhuman biological or behavioral processes or the internalology of the human and not the resulting external behavioral characteristics like driving a car For instance there are homeostasis processes where for instance temperature is regulated in the human body

*The Epistemic Lightness of Truth* Cezary Cieśliński, 2017-12-07 This book analyses and defends the deflationist claim that there is nothing deep about our notion of truth According to this view truth is a light and innocent concept devoid of any essence which could be revealed by scientific inquiry Cezary Cieśliński considers this claim in light of recent formal results on axiomatic truth theories which are crucial for understanding and evaluating the philosophical thesis of the innocence of truth Providing an up to date discussion and original perspectives on this central and controversial issue his book will be important for those with a background in logic who are interested in formal truth theories and in current philosophical debates about the deflationary conception of truth
