**Ecology of Tropical Oceans** Bozzano G Luisa,2012-12-02 This book breaks new ground with the integration of geography oceanography plankton and benthic biology as well as fish to present a comprehensive account of the ecology of the tropical ocean Proceeding from a description of the geomorphology sediments and vegetation of tropical continental shelves and the oceanography of tropical regions the authors describe the benthos plankton and fish communities of tropical seas An examination of the production of plant and animal life in tropical oceans is presented together with the numerical population biology of fish and invertebrates *Tropical Oceans* Kelley MacAulay,Bobbie Kalman,2006 Describes all the life forms that are supported by tropical oceans as well as weather patterns over those same oceans **Dynamics of the Tropical Atmosphere and Oceans** Peter J. Webster,2020-06-08 This book presents a unique and comprehensive view of the fundamental dynamical and thermodynamic principles underlying the large circulations of the coupled ocean atmosphere system Dynamics of The Tropical Atmosphere and Oceans provides a detailed description of macroscale tropical circulation systems such as the monsoon the Hadley and Walker Circulations El Ni o and the tropical ocean warm pool These macroscale circulations interact with a myriad of higher frequency systems ranging from convective cloud systems to migrating equatorial waves that attend the low frequency background flow Towards understanding and predicting these circulation systems A comprehensive overview of the dynamics and thermodynamics of large scale tropical atmosphere and oceans is presented using both a reductionist and holistic perspectives of the coupled tropical system The reductionist perspective provides a detailed description of the individual elements of the ocean and atmospheric circulations The physical nature of each component of the tropical circulation such as the Hadley and Walker circulations the monsoon the incursion of extratropical phenomena into the tropics precipitation distributions equatorial waves and disturbances described in detail The holistic perspective provides a physical description of how the collection of the individual components produces the observed tropical weather and climate How the collective tropical processes determine the tropical circulation and their role in global weather and climate is provided in a series of overlapping theoretical and modelling constructs The structure of the book follows a graduated framework Following a detailed description of tropical phenomenology the reader is introduced to dynamical and thermodynamical constraints that guide the planetary climate and establish a critical role for the tropics Equatorial wave theory is developed for simple and complex background flows including the critical role played by moist processes The manner in which the tropics and the extratropics interact is then described followed by a discussion of the physics behind the subtropical and near equatorial precipitation including arid regions The El Ni o phenomena and the monsoon circulations are discussed including their covariance and predictability Finally the changing structure of the tropics is discussed in terms of the extent of the tropical ocean warm pool and its relationship to the intensity of global convection and climate change Dynamics of the Tropical Atmosphere and Oceans is aimed at advanced undergraduate and early career
