Tropospheric Ozone:

Tropospheric Ozone Ivar S.A. Isaksen, 2012-12-06 The main objective of the workshop was to increase our knowledge of ozone formation and distribution in the troposphere its relation to precursor NO and HC species distribution how it is affected by transport processes in the troposphere and to show how the increasing levels of ozone can cause environmental problem The focus was on the interaction of ozone on regional and global scales There is mounting evidence that such interactions occur and that the ozone levels are increasing in most of the Northern Hemisphere troposphere A likely source of ozone increase is human activity As result of this tropospheric climate may change significantly within a few decades either through direct effects by ozone itself or indirectly through its effect on other radiatively active trace species Further more ozone may have adverse effects on vegetation over large continental areas due to enhanced levels which have been measured to take place As it is well known that ozone plays a key role in the oxidation of a large number of chemical species in the troposphere natural as well as man made the atmospheric distribution of important trace species like sulfur dioxide nitrogen oxides and hydrocarbons could be markedly changed as a result of ozone changes The rapidly increasing interest in tropospheric ozone and the key role ozone plays in several atmospheric areas as well the obvious increase in the tropospheric concentration of ozone made ozone a natural choice as a topic for the workshop

Tropospheric Ozone S.B. Agrawal, Madhoolika Agrawal, Anita Singh, 2021-09-20 This book presents updated and relevant information on the tropospheric ozone problem and its effects on the plants and human health The contributions here present in depth knowledge about history pattern sources environmental factors and other necessary aspects of the tropospheric ozone problem The book provides a balanced view of current developments on the effects of the tropospheric ozone on plant and human health crop production and ecosystem services In addition to the effects of the tropospheric ozone on growth and physiological and biochemical traits it also considers the molecular basis of plant responses to ozone The book encompasses a holistic view on various interconnected issues of ozone pollution and will appeal to scientists from all over the world

Tropospheric Ozone Research Ø Hov, 1997-11-18 One of the principal concerns in recent years regarding the atmospheric environment has been the formation of ozone and other photo oxidants over much of Europe in the summer Ozone is formed in the atmosphere by a complex series of chemical reactions in the presence of sunlight from volatile organic compounds and nitrogen oxides As the reactions take place in air flows determined by the detailed meteorological situation the measurement interpretation understanding and modelling of the levels fluxes and origins of the ozone are extremely difficult The present volume reviews several of the currently important questions and presents detailed reports from investigators all over the continent As such it provides insight into the current scientific views about ozone in Europe This is Volume 6 of the series on the Transport and Chemical Transformation of Pollutants in the Troposphere

Tropospheric

Ozone David McKee, 1993-10-25 Tropospheric ozone has long been recognized as a major environmental concern. Levels of ozone concentration have grown dramatically and the effects of ozone exposure have been examined in virtually thousands of studies worldwide. This timely new reference presents the state of the art in ozone regulation, human health effects, agricultural implications, and the economics of ozone reduction. Tropospheric Ozone guides you through the history of air pollution legislation and cites government initiatives to reduce ozone emissions. Ozone concentration data is supplied for a variety of geographic regions in examining the causes of ozone concentration and its potential effects on human populations, crops, and forests. Important issues such as crop yield, plant growth, and crop losses due to exposure are addressed, which will help develop an understanding of the economic implications of agricultural damage. New information is presented regarding risk assessment and human monitoring studies. EPA guidelines are reviewed and potential health problems associated with ozone exposure are discussed in a practical, informative format. This valuable reference will benefit air pollution engineers, environmental consultants, government agency employees, regulators, industry professionals, health professionals, crop and soil scientists, environmental health and safety professionals, risk assessment professionals, and students in the environmental sciences.

Tropospheric Ozone and its Impacts on Crop Plants Supriya Tiwari, Madhoolika Agrawal, 2018-03-07

The research and its outcomes presented here focuses on tropospheric or ground level ozone in particular due to its surfacing as a major threat to crop productivity around the world. This book presents the ozone concentration data for a variety of geographical regions, examines the factors responsible for its increasing concentrations, and its potential effects on physiological and biochemical responses culminating in crop productivity losses, which in turn may pose a serious threat to global food security. Besides this, certain ameliorative measures that could be adopted to assess ozone injury in plants are also discussed. Global climate change scenarios predict a significant increase in future tropospheric ozone concentration. Particular attention is therefore given to evaluate the effect of global climate change on ozone concentrations. Readers will also discover how yield losses due to ozone are related to changes in the socio-economic conditions of the society, especially in South Asian regions. Students and researchers studying crop and soil science, environmental scientists, risk assessment professionals, and policy makers will find this book of interest.
