

Songs of the Humpback Whale

Whale songs have probably been heard, though seldom recognized as such, ever since man began to make voyages by sea. In the literature of whaling alone there are many accounts of strange, ethereal, eccentric, reverberating sounds through a quiet ship at night, mystifying sailors in their bunk. Long after such experiences were first mentioned, scientists were able to explain what caused them . . . If the idea of whale "singing" seems odd, the cause may lie in the general meanings of the word "song." Quite apart from any aesthetic judgment one might make about them, the sounds produced by Humpback whales can properly be called songs because they occur in complete sequences that are repeated. Bird sounds are called songs for the same reason. Birds sing songs that are repeated fairly exactly and Humpback whales too are very faithful to their own well-learned sequence of sounds. Humpback whale songs are far longer than bird songs. The shortest Humpback song recorded lasts six and a half minutes and the longest is more than thirty minutes. The periods between Humpback whale songs are not longer than the periods between notes within the song. In other words, they are repeated without any obvious break. As with birdsong, it doesn't matter where in its song the Humpback starts or stops.
