The Chains Of Protection:

Insulin Pedro Cuatrecasas, Steven Jacobs, 2012-12-06 It is fourteen years since insulin was last reviewed in The Handbook of Experimental Pharmacology in volume 32 The present endeavor is more modest in scope Volume 32 appeared in two separate parts each having its own subeditors and together the two parts covered nearly all areas of insulin pharmacology Such comprehensiveness seemed impractical in a new volume The amount of information related to insulin that is now available simply would not fit in a reasonable amount of space Furthermore for better or worse scientists have become so specialized that a volume providing such broad coverage seemed likely in its totality to be of interest or value to very few individuals We therefore decided to limit the present volume to the following areas insulin chemistry and structure insulin biosynthesis and secretion insulin receptor and insulin action at the cellular level We felt these areas formed a coherent unit We also felt perhaps as much because of our own interests and perspectives as any objective reality that these were the areas in which recent progress has been most dramatic and yet paradoxically and tantalizingly these were the areas in which most has yet to be learned Even with this limited scope there are some major gaps in coverage Regrettably two important areas the beta cell ATP sensitive potassium channel and the glucose transporter were among these Nevertheless the authors who contributed have done an excellent job and we would like to thank them for their diligence **IT Supply Chain Security** United States.
