The Tropical Forest:

Tropical Forests Tom Jackson, 2003 A comprehensive look at the tropical forest biome examining its climate plants animals people and future plus detailed views of some particular tropical forest locations **Tropical Forest Biomes** Barbara A. Holzman, 2008-09-30 This volume in the Greenwood Guides to Biomes of the World series covers the lush beautiful and rapidly shrinking tropical forest biomes The volume covers the two major tropic forest biomes tropical rainforests and tropical seasonal forests **An Introduction to Tropical Rain Forests** T. C. Whitmore, 1998-03-26 This new edition of Whitmore's classic introduction to tropical rain forests has been comprehensively revised and updated reflecting the changes which have taken place since it was first published in 1990 The sections on human impact have been extended including a new global assessment of deforestation and details of new research on biodiversity and conservation The book remains unique in linking rain forest biology and ecology with silviculture and with concerns over sustainable resource utilization and the future of the tropical rain forests Accessibly written and illustrated throughout it is a must for biology and geography students and anyone who seeks to know more about the nature and importance of the world's tropical rain forests *Tropical Forests* Bernard Marcus, 2009 The first text in a series of single topic ecology books *Tropical Forests* is an ideal text or supplement for introductory biology ecology and environmental science courses It provides students with an accurate easy to read and easy to understand account of this important environmental topic that is often overlooked or glossed over in general texts Its narrative style and clear illustrations and diagrams engage students and paint a clear picture of the important concepts presented throughout the text *Developing a Scientific Basis for Sustainable Management of Tropical Forest Watersheds* Min Thant Zin, 2005 Myanmar is a country situated in continental Southeast Asia and most parts of the country are highlands forming as watersheds of country's drainage systems These highland watersheds are usually clad with tropical forests of different types providing productive and protective functions essential for sustainable development of the country Accordingly sustainable forest management has to be adopted as a standard approach for effective watershed conservation whereas timber production guided by sustained yield principles would be one of the overriding objectives Four case studies provide some useful insight into resolution for some technical problems of the prevailing strategic challenges in sustainable forest management for effective conservation of forest watersheds of the country **Tropical Forest Ecology** Egbert Giles Leigh, 1999 In *Tropical Forest Ecology* Egbert G Leigh Jr one of the world's foremost tropical ecologists introduces readers to the tropical forest and describes the intricate web of interdependence among the great diversity of tropical plants and animals Focusing on the tropical forest of Barro Colorado Island Panama Leigh shows what Barro Colorado can tell us about other tropical forests and what tropical forests can tell us about Barro Colorado This book considers three essential questions for understanding the ecological organization of tropical forests How do they stay green with their abundance of herbivores Why do they have such a diversity of plants and animals And what role

does mutualism play in the ecology of tropical forests Beautifully written and abundantly illustrated *Tropical Forest Ecology* will certainly appeal to a wide variety of scientists in the fields of evolution tropical biology botany zoology and natural history

Tropical Forests Peter D. Moore, 2009 Explores the biodiversity of forests from microbes to mammals as well as the adaptations of organisms to their environment and to the other species surrounding them This book examines the interactions between organisms and their physical surroundings and the processes that link the two into an integrated ecosystem

Tropical Forest Remnants William F. Laurance, Richard O. Bierregaard, 1997-06-21 We live in an increasingly fragmented world with islands of natural habitat cast adrift in a sea of cleared burned logged polluted and otherwise altered lands Nowhere are fragmentation and its devastating effects more evident than in the tropical forests By the year 2000 more than half of these forests will have been cut causing increased soil erosion watershed destabilization climate degradation and extinction of as many as 600 000 species *Tropical Forest Remnants* provides the best information available to help us understand manage and conserve the remaining fragments Covering geographic areas from Southeast Asia and Australia to Madagascar and the New World this volume summarizes what is known about the ecology management restoration socioeconomics and conservation of fragmented forests Thirty three papers present results of recent research as well as updates from decades long projects in progress Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work

Tropical Forests Juan A. Blanco, Yueh-Hsin Lo, Shih-Chieh Chang, 2016-11-09 Large regions of the planet have been transformed from their natural composition into different human made landscapes farmlands forest plantations pastures etc Such process called land use change is one of the major components of the current global change which has brought the planet into a new geological era the Anthropocene Land use change is particularly important in tropical forests as this ecosystem type is still heavily affected by deforestation for timber extraction agricultural land creation of urban expansion Changing land use has important implications for the services that tropical forests provide production of goods such as timber food or water regulation of process such as nutrient cycling carbon sequestration local weather or climate extremes generating the framework for economic and cultural activity etc Therefore keeping ecosystem services when changing the use of the tropical lands is a major challenge in tropical regions This brief book by showcasing different research work done in tropical countries provides a first introduction on this topic discussing issues such as biodiversity loss changes in local weather or nutrient cycling patterns and economic activities around tropical forests and tools to detect and quantify the importance of land use change

The Tropical Forest Renato Massa, 1997 Discusses the environment of a tropical forest and the different types of vegetation and animal life that thrive there

The Economics of the Tropical Timber Trade BarBier/Burgess, 1994-01-01 There is genuine cause for concern over the excessive exploitation of tropical forest in many regions but also many misconceptions about the causes and sources of this exploitation *The Economics of the Tropical Timber Trade* provides a detailed analysis of the economic linkages between

the trade and forest degradation Based on a report prepared for the ITTO it looks at current and future market conditions and assesses the impacts on tropical forests of both the international timber trade and domestic demand The authors examine the causes of deforestation and compare the environmental impacts of the timber trade with other factors such as the conversion of the forest to agriculture Finally they assess the national and international trade policy options and discuss the potential role that interventions in the international timber trade may have in promoting efficient and sustainable use of forest resources This book is of interest to those concerned with forest management and policy trade and environment and with the economics of conservation and resource use *Protecting the Tropical Forests* Germany (West).

Enquete-Kommission "Vorsorge zum Schutz der Erdatmosphäre.",1990 [Saving the Tropical Forests](#) Judith Gradwohl,Russell Greenberg,2013-11-05 The destruction of the tropical forest is one of the major problems of our time Vast areas are rapidly becoming wastelands which support only a few tough weeds perhaps some cattle and the farms allowed to the poor This book provides a vision of hope in Latin America Africa And South East Asia growing numbers of people are developing techniques specifically designed to promote the wise use and preservation of remaining forest lands However these grassroots strategies are often ignored in favour of grandiose schemes which inevitably fail This pattern must be broken now or the tropical forests will be lost forever Published in association with the Smithsonian Institution Preface by Michael Robinson Director National Zoological Park Smithsonian Institution Originally published in 1988 *Tropical Forests in Transition* J. Goldammer,2013-03-08 In evolutionary time scales natural disturbances have affected the vegetation on Earth During the Quaternary the forest biomes of the tropics were subjected to manifold disturbances Climate changes and climate oscillations were associated with changing precipitation and drought regimes flooding siltation landslides etc The prehistorical forest was also influenced by the effects of large wildlife populations Large scale catastrophies in the forest biomes were mainly caused by abiotic environmental alterations the small scale disturbances were and still are related to both biotic and abiotic processes Both the large and the small scale disturbances have played a significant role in shaping distribution dynamics structure and composition of the paleoforest After the expansion of hominids and early humans and later by modern humans the anthropogenic influences on the tropical forest began to overlap natural disturbances Today s anthropogenic impacts on the tropical forests differ qualitatively and quantitatively from the natural disturbances The speed of tropical deforestation and savannization is dramatically increasing The physical and chemical impacts of forest conversion and biomass burning add to other anthropogenic influences on the atmosphere and climate The expected anthropogenic climate change will also have considerable impacts on the tropical flora and fauna The book on *Tropical Forests in Transition* synthesizes information on changing environmental conditions and human impacts on the tropical forest by looking back to the paleoecology analyzing the impact of modern human populations and modeling the future of the tropical forest in a changing environment The aim of the book is to strengthen multidisciplinary thinking in disturbance ecology

Restoration of Tropical Forest Ecosystems Helmut Lieth, M. Lohmann, 1914 The destruction of the tropical forests continues rapidly We all know that this has global ecological and economic consequences The problem is of such magnitude that it can only be compared to warfare The destruction of tropical forests is both detrimental to the global ecology as well as posing a serious threat to the people living in these areas Furthermore the overutilization of such a valuable resource poses a serious threat to the next generations Besides the problem generated for the people in these regions and for the earth in general there is a moral obligation to preserve the vast biological diversity in the tropical forests We have a commitment to all species on earth as well as man and therefore need to preserve as many as possible if not all This book discusses the problem from different angles from forestry ecology and nature conservation The two main problem areas are first the wise utilization of that portion of the forest which will be used especially the introduction of planned forestry in such areas and second the development of a good plan for nature conservation in the tropics

Tropical Forest Ecology Egbert Giles Leigh Jr., 1999-03-04 In *Tropical Forest Ecology* Egbert G Leigh Jr one of the world's foremost tropical ecologists introduces readers to the tropical forest and describes the intricate web of interdependence among the great diversity of tropical plants and animals Focusing on the tropical forest of Barro Colorado Island Panama Leigh shows what Barro Colorado can tell us about other tropical forests and what tropical forests can tell us about Barro Colorado This book considers three essential questions for understanding the ecological organization of tropical forests How do they stay green with their abundance of herbivores Why do they have such a diversity of plants and animals And what role does mutualism play in the ecology of tropical forests Beautifully written and abundantly illustrated *Tropical Forest Ecology* will certainly appeal to a wide variety of scientists in the fields of evolution tropical biology botany zoology and natural history

Emerging Threats to Tropical Forests William F. Laurance, Carlos A. Peres, 2006-10-01 *Emerging Threats to Tropical Forests* reveals the remarkably diverse panoply of perils to tropical forests and their biota with particular emphasis on recent dangers William F Laurance and Carlos A Peres identify four categories of emerging threats those that have only recently appeared such as the virulent chytrid fungus that is decimating rainforest amphibians throughout the tropical world those that are growing rapidly in importance like destructive surface fires those that are poorly understood namely global warming and other climatic and atmospheric changes and environmental synergisms whereby two or more simultaneous threats such as habitat fragmentation and wildfires or logging and hunting can dramatically increase local extinction of tropical species In addition to documenting the vulnerability of tropical rainforests the volume focuses on strategies for mitigating and combating emerging threats A timely and compelling book intended for researchers students and conservation practitioners *Emerging Threats to Tropical Forests* will interest anyone concerned about the fate of the world's most threatened tropical ecosystems

Tropical Forest Ecosystems Unesco, United Nations Environment Programme, Food and Agriculture Organization of the United Nations, 1978 Forest and woodlands form the natural type of vegetation cover in most of the humid and subhumid

parts of the tropical world They are important for many reasons not least because of their role in meeting man s needs for timber food and other economic environmental and socio cultural values For many developing countries the wise use of the resources provided by tropical forests and the balanced rural development of zones covered by them lie at the heart of their national development strategies and programmes

The Tropical Rain Forest Marius Jacobs, Remke Kruk, Roelof A. A. Oldeman, 1988-01 This book deals with both the biological and the human aspects of the tropical rain forest Starting with an account of the present situation and the reasons for the mounting public concern it then tells how scientific research is conducted in these immensely high forests Climate and soil as basic factors in the ecology of the rain forest are discussed and the other characteristics of a rain forest are also carefully considered their enormous variety of species the woody character of those species and consequent difficulties of regeneration and the intricate relationships which have evolved between plants and animals in the closed circuit rain forest existence The focus of the book is on the tropical rain forest in optima forma at its present peak of evolution and is therefore general in concept Special attention is paid to ecological problems The approach of the subject is such that the book should appeal to biologists and laymen alike
