Tropical Deforestation:

Controlling Tropical Deforestation Alan Grainger, 2013-11-05 Tropical rain forest is being cleared so rapidly and on such a scale that it is a major global environmental problem threatening the survival of half of the world's plant and animal species and contributing to global climate change through the greenhouse effect. But despite widespread concern for over twenty years only limited progress has been made in controlling deforestation and improving forest management in the humid tropics. In this book Alan Grainger offers a fresh analysis of the causes of deforestation and presents an integrated strategy for controlling it. His strategy embraces agriculture, forestry and conservation and stresses the need for changes in government policies if land use is to be made more sustainable and the underlying causes of the problem are to be addressed. *Controlling Tropical Deforestation* is essential reading for policy makers, agronomists, foresters, conservationists and development professionals. To general readers and students on introductory courses at schools and universities it also offers the first concise but comprehensive overview of the causes, scale and consequences of deforestation. Alan Grainger is a lecturer in geography at the University of Leeds. He is author of *The Threatening Desert: Controlling Desertification* also published by Earthscan. Originally published in 1992.

Tropical Deforestation Sharon L. Spray, Matthew David Moran, 2006-04-27 *Tropical Deforestation* introduces readers to the important concepts for understanding the environmental challenges and consequences of the deforestation. Contributions from scientists and academics in the social sciences and humanities provide readers with an initial tool kit for understanding the concepts central to their disciplinary perspective and the multi-dimensional aspects of deforestation.

The Causes of Tropical Deforestation Katrina Brown, David William Pearce, 1994 Presents econometric analysis of tropical deforestation, quantifying and examining its local and underlying global causes with discussion of factors such as population, debt, income and poverty, the timber trade and agricultural development and regional and country case studies focusing on Asia and Latin America. Of interest to students and professionals in economics, environmental science and development studies. Annotation copyright by Book News Inc, Portland, OR.

Tropical Deforestation Jin-Bee Ooi, 1993 This study addresses the now familiar problem of tropical deforestation from an unfamiliar angle. More specifically, the author focuses on the time factor in the natural regeneration of the tropical rain forest. He examines the economics and practical implications of the very long period of time needed for such forests to regrow and concludes that the tyranny of time makes it unlikely that the process of deforestation in the tropical rain forest countries can be halted.

Tropical Deforestation C. J. Jepma, 1995 First Published in 2009. Routledge is an imprint of Taylor & Francis, an informa company.

Tropical Deforestation Leslie Elmer Sponsel, Thomas N. Headland, Robert Converse Bailey, 1996 The authors present fresh perspectives on the major global crisis of deforestation from a wide range of fields including biological ecology, forest history, conservation biology, anthropology, political economy and development economics.

Tropical Forests Thomas K. Rudel, 2005 In *Tropical Forests* Rudel analyzes hundreds of local studies from the past twenty

years to develop a much needed global perspective on deforestation With separate chapters on individual regions including South and Central America the Caribbean and Africa Rudel s work offers an up to date assessment of the world s tropical forests In the concluding chapter Rudel considers the implications of these trends and describes policy directions for conserving biodiversity and promoting sustainable development in each region *Sustainable Forestry Challenges for Developing Countries* Matti Palo,G. Mery,2012-12-06 This book is an outcome of a research project on Sustainable Forestry and the Environment in Developing Countries The project has been run by Metsantutki muslaitos METLA the Finnish Forest Research Institute since 1987 and will be completed this year A major output by this project has so far been a report in three volumes on Deforestation or development in the Third World The purpose of our multidisciplinary research project is to generate new knowl edge about the causes of deforestation its scenarios and consequences More knowledge is needed for more effective efficient and equitable public policy both at the national and intemationallevels in supporting sustainable forestry in develop ing countries Our project has specifically focused on 90 tropical countries as one group and on three subgroups by continents as well as the three case study countries the Philippines Ethiopia and Chile The University of Joensuu has been our active partner in the Philippine study We have complemented the three cases by the analyzes of Brazil and Indonesia the two largest tropical forest owning countries Some other interesting country studies were annexed to complement our book both by geography and expertise The United Nations University World Institute for Development Economics Research UNUIWIDER in Helsinki Finland has also been partly engaged Most of the results from its project on The Forest in the South and North in Context of Global Warming will however be published later in a separate book

World Forests, Markets and Policies Matti Palo,J. Uusivuori,G. Mery,2001-12-31 This book offers information and insights into the potential of market and policy instruments in improving the state of the world s forests It advocates the use of the concept of optimal mix of markets and policies as an approach to view the appropriate and operational roles of market and government in dealing with forestry issues It does not offer a list of policy recommendations to be used as a general tool to combat the threats facing the world s forests Obviously the optimal mix of markets and policies must depend on the varying national and local conditions and more specifically on the level of development The contents of this volume are organized in five Parts Part I Editorial Perspectives briefly reviews the outline of the book and analyses the balanced use of markets and policies to support world forests towards sustainable forest management Part II reviews changes and trends in society and environment outside the forest sector After all the evolution of forestry and forest industries is more dependent on these external changes than on changes internal to the sector Two important aspects that may strongly affect the future of the forest sector are covered the potential of wood biomass in replacing oil and the global freshwater outlook Part III focuses on the importance of forests and is primarily aimed at those outside the forest sector Current innovations in information technology and the fast removal of government regulations have enabled forest industry corporations to invest on a larger

scale in optimal locations worldwide The rapid expansion of forest plantations in the South is a response not only to globalization but also to the expanding conservation pressures in the North Part IV is the global forum that introduces a few topical forest sector issues affecting the world as a whole However these tend to be very complex and can rarely be adequately covered from a single perspective Therefore discussants were invited to bring up additional points of view Forests have great potential in the control of climate change This is analyzed through both the increased use of wood for energy and the possible forestry investments by Northern nations in the South to cope with the requirements of the Kyoto Protocol The interlinkages of forests and water are also highlighted Part V is entitled Regional Forum Its purpose is to analyze globally relevant continental issues Interregional studies are followed by articles focusing on Latin America Africa Asia and the Pacific North America Europe and the Russian Federation The role of the G8 economic powers in the development of the world's forests is studied from the days of imperialism to the current Action Programme on Forests and the implementation of the programme is followed up A number of comparative analyses of countries are presented The impacts of globalization on the forest sector in the Russian Far East and reforms in support of sustainable forest management in Russia are the two final themes of the book

Biodiversity Conservation C. A. Perrings, 2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science's Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries | This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use

Tropical Deforestation Thomas K. Rudel, Bruce Horowitz, 1993 The highly publicized obscenity trial of Radclyffe Hall's *The Well of Loneliness* 1928 is generally recognized as the crystallizing moment in the construction of a visible modern

English lesbian culture marking a great divide between innocence and deviance private and public New Woman and Modern Lesbian Yet despite unreserved agreement on the importance of this cultural moment previous studies often reductively distort our reading of the formation of early twentieth century lesbian identity either by neglecting to examine in detail the developments leading up to the ban or by framing events in too broad a context against other cultural phenomena Fashioning Sapphism locates the novelist Radclyffe Hall and other prominent lesbians including the pioneer in women's policing Mary Allen the artist Gluck and the writer Bryher within English modernity through the multiple sites of law sexology fashion and literary and visual representation thus tracing the emergence of a modern English lesbian subculture in the first two decades of the twentieth century Drawing on extensive new archival research the book interrogates anew a range of myths long accepted without question and still in circulation concerning to cite only a few the extent of homophobia in the 1920s the strategic deployment of sexology against sexual minorities and the rigidity of certain cultural codes to denote lesbianism in public culture

World Forests, Society and Environment Matti Palo, J. Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests societies and the environment from an independent and non-governmental point of view A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found To achieve this modern science needs to find a clearer picture of relationships between forests human activity and the environment and of the consequences of environmental change for the ability of societies to survive Part I Editorial Perspectives is analyzing the ongoing globalization processes of forests societies and the environment Part II Society and Environment reviews worldwide trends with significance for the future of forests and forestry While the trends are influenced by forest sector issues that sector is influenced to a much larger extent by external factors such as demography urbanization or technological development Part III Importance of Forests looks at the value of the goods and services of forests tangible and intangible market and non market and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development In Part IV Global Forum scientists take up global forestry themes deforestation trade and the environment climate change biodiversity with the aim of stimulating wider discussion Part V Regional Forum looks at major themes of particular relevance to Africa Asia Pacific Latin America North America and Europe such as farm and agroforestry corruption and concessions urban forestry and environmental conflicts Part VI introduces the special theme forest sectors in transition economies Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted In the past millennium the entire world has been discovered In the past half century the contribution of forests to the economy worldwide has been perceived while only recently have their societal and environmental benefits been globally recognized Globalization is a demanding process requiring knowledge and information This book offers knowledge facts and information
