Global Computing. Programming Environments, Languages, Security, and Analysis of Systems Corrado Priami, 2003-11-24 This book constitutes the revised refereed summary of the results presented during the European IST/FET proactive initiative's Global Computing workshop GC 2003 held in Rovereto, Italy, in February 2003. The eight revised full papers and survey articles presented together with a detailed introductory overview assess the state of the art in global computing. Global computing attempts to develop models, frameworks, methods, and algorithms to build systems that are flexible, dependable, secure, robust, and efficient. The dominant technical issues are coordination, interaction, security, safety, scalability, robustness, mobility, risk management, performance analysis, etc.

Concurrent Object-Oriented Programming and Petri Nets Gul A. Agha, 2001-04-18 Concurrency and distribution have become the dominant paradigm and concern in computer science. Despite the fact that much of the early research in object-oriented programming focused on sequential systems, objects are a natural unit of distribution and concurrency, as elucidated early on by research on the Actor model.

Thus models and theories of concurrency the oldest one being Petri nets and their relation to objects are an attractive topic of study This book presents state of the art results on Petri nets and concurrent object oriented programming in a coherent and competent way The 24 thoroughly reviewed and revised papers are organized in three sections The first consists of long papers each presenting a detailed approach to integrating Petri nets and object orientation Section II includes shorter papers with emphasis on concrete examples to demonstrate the approach Finally section III is devoted to papers which significantly build on the Actor model of computation *Tutorial Hard Real-time Systems* John A.
