

Split-splitless Injector

Split-splitless injectors are used for introduction of **highly concentrated** samples into capillary columns. Sample is volatilized by injection into a heated glass liner. The carrier gas then either **sweeps the total sample (Splitless mode)** or a **portion (Split mode) into the column**. The split vent controls the amount of sample entering and the other portion is exhausted. This mode is useful for highly concentrated or dirty samples. It helps in producing **narrow band widths**. Split-less injection is useful for **trace level analysis**.

major or minor compounds of food. These techniques ranged from the non-invasive and non-destructive ones such as infrared spectroscopy, magnetic resonance, and ultrasounds to emerging areas as nanotechnology, biosensors, and electronic noses and tongues, including those already well established in food analysis such as chromatographic and electrophoretic techniques. These chapters also include two important tools for solving problems in chemical and biological analysis such as mass spectrometry and molecular-based techniques.

Provided by publisher: *Principles and Practice of Modern Chromatographic Methods* Kevin Robards, Danielle Ryan, 2021-12-03. *Principles and Practice of Modern Chromatographic Methods* Second Edition takes a comprehensive unified approach in its presentation of chromatographic techniques. Like the first edition, the book provides a scientifically rigid but easy-to-follow presentation of chromatography concepts that begins with the purpose and intent of chromatographic theory, the what and why that are left out of other books attempting to cover these principles. This fully revised second edition brings the content up to date, covering recent developments in several new sections and an additional chapter on composite methods. New topics include sample profiling, sample preparation, sustainable green chemistry, 2D chromatography, miniaturization, nano LC, HILIC, and more. Contains thorough chapters that begin with an updated schematic overview and a visual representation of the content. Avoids the obfuscation of different terminologies and classification systems that are prevalent in the area, such as the relationship between liquid chromatography and column chromatography. Provides integrated and comprehensive topic coverage based on chromatographic bibliometrics and survey reports on the relative usage of chromatographic techniques.
