Static Headspace Gas Chromatography:

Static Headspace-Gas Chromatography Bruno Kolb, Leslie S. Ettre, 2006-05-05 STATIC HEADSPACE GAS CHROMATOGRAPHY THE ONLY REFERENCE TO PROVIDE BOTH CURRENT AND THOROUGH COVERAGE OF THIS IMPORTANT ANALYTICAL TECHNIQUE Static headspace gas chromatography HS GC is an indispensable technique for analyzing volatile organic compounds enabling the analyst to assay a variety of sample matrices while avoiding the costly and time consuming preparation involved with traditional GC Static Headspace Gas Chromatography Theory and Practice has long been the only reference to provide in depth coverage of this method of analysis The Second Edition has been thoroughly updated to reflect the most recent developments and practices and also includes coverage of solid phase microextraction SPME and the purge and trap technique Chapters cover Principles of static and dynamic headspace analysis including the evolution of HS GC methods and regulatory methods using static HS GC Basic theory of headspace analysis physicochemical relationships sensitivity and the principles of multiple headspace extraction HS GC techniques vials cleaning caps sample volume enrichment and cryogenic techniques Sample handling Cryogenic HS GC Method development in HS GC Nonequilibrium static headspace analysis Determination of physicochemical functions such as vapor pressures activity coefficients and more Comprehensive and focused **Static Headspace—Gas Chromatography** Second Edition provides an excellent resource to help the reader achieve optimal chromatographic results Practical examples with original data help readers to master determinations in a wide variety of areas such as forensic environmental pharmaceutical and industrial applications

Static Headspace—Gas Chromatography Bruno Kolb, Leslie S. Ettre, 1997-06-06 Static Headspace Gas Chromatography Theory and Practice Bruno Kolb Leslie S Ettre Static equilibrium headspace gas chromatography static HS GC offers a reliable simple and accurate way to quantitate volatile compounds in liquid and solid matrices The technique is being used in increasingly more analytical laboratories in a variety of industries because it enables high sample turnaround automated high performance GC analysis and automated and unattended sample clean up by gas extraction while avoiding laborious sample preparation Static Headspace Gas Chromatography provides the most thorough and current treatment available on this technique The book covers the theory of headspace sampling as related to selection of the operational parameters describes quantitative calibration techniques and presents and presents detailed methods all adapted for automation It includes many examples of proven practical applications complete with original data from the most important applications of static HS GC in environmental analysis polymers packaging pharmaceuticals and food analysis *Static Headspace Sampling Followed by Gas Chromatography and Gas Chromatography-mass Spectrometry Applied to Various Complex Matrices* Michael Edward Miller, 1999 *Handbook of GC/MS* Hans-Joachim Hübschmann, 2008-12-03 This is the first comprehensive reference work for GC MS now in its second edition It offers broad coverage from sample preparation to the evaluation of MS Data including library searches Fundamentals techniques and applications are described A large part of

the book is devoted to numerous examples for GC MS applications in environmental food pharmaceutical and clinical analysis These proven examples come from the daily practice of various laboratories The book also features a glossary of terms and a substance index that helps the reader to find information for his particular analytical problem The author presents in a consistent and clear style his experience from numerous user workshops which he has organized This is a thoroughly revised and updated English edition based on an edition which was highly successful in Germany

Static Headspace Sampling Followed by Gas Chromatography and Gas Chromatography-mass Spectrometry Applied to Various Complex Matrices Michael Edward Miller, 1999 Static headspace sampling was studied to 1 minimize the effect of a soil s matrix on the analysis of benzene toluene ethylbenzene and xylenes from soils 2 determine the Henry s law coefficients for various fuel components 3 compare gas sampled and solid phase microextraction SPME sampled static headspace and 4 successfully couple static headspace sampling to high speed GC The effects of various matrix modifiers were studied in addition to alternative techniques such as the full evaporation technique to determine an effective way to eliminate the effect of the matrix on analyte recovery The full evaporation technique used very high temperatures to force the analytes of interest into the gaseous phase Using these high temperatures and no matrix modifying solution provided an analysis free of matrix effects Henry s Law coefficients were determined for several compounds found in reformulated gasolines This new method relies only on the knowledge of the phase ratio defined by the experimental apparatus The value obtained for MTBE using the method was in excellent agreement with other literature values specifically 1.7 M atm Other compounds studied included ETBE TAME DIPE benzene toluene and ethylbenzene The comparison of gas sampled and SPME sampled static headspace methods when applied to GC MS analyses was examined for the effectiveness of transferring of volatile components of several juices from sample vial to chromatograph The results of this study showed the SPME fiber to be approximately 1400 time more effective owing to the ability of the fiber to concentrate the analytes and transfer them without the need to inject large volumes of inert gas into the instrument Finally the coupling of static headspace to high speed GC allowed the reduction of the analysis time reported in the SPME study by a factor of approximately twenty times from 75 to just 4 minutes The sampling system designed used batch equilibration of many samples to enhance the speed of analysis in conjunction with a sample collection method that used a trapping column to collect the sample which is rapidly transferred from the sample vial to the instrument by a stream of nitrogen
