The Tectonics of Structural Systems Yonca Huro, 2015-09-16 The Tectonics of Structural Systems provides an architectural approach to the theory of structural systems The book combines structural recommendations to follow during the architectural design of various structural systems and the tectonic

treatment of structural recommendations in architecture Written expressly for students the book makes structures understandable and useful providing practical and useful knowledge about structures a design based approach to the subject of structures and a bridge in the gap between structures and the theory of design Good architectural examples for each structural system are given in order to demonstrate that tectonics can be achieved by applying technical knowledge about structures Over 300 illustrations visually unpack the topics being explained making the book ideal for the visual learner

Tensile Surface Structures Michael Seidel, 2009-05-13 Tensile surface structures are the

visual expression of an intensive rethinking of the topic of building envelopes by designers Advances in design methods materials construction elements and assembly and erection planning in the field of lightweight construction are enabling ever more exacting applications of tensile structures with envelope and structural functions especially in roofing over large clear spans without internal support However the particular mechanical characteristics of the materials used in the construction of textile structures demand consideration of the question of buildability This book provides answers by discussing the fundamental influence of material manufacture and assembly in deciding the most suitable type of building or structure and its detailing in the design process The fundamentals of material composition manufacturing process patterning and the behaviour of flexible structural systems are all explained here as well as their use as structural and connection elements and special attention is given to the erection of wide span lightweight structures The erection equipment is described as well as the lifting and tensioning process and the construction methods used to erect the characteristic types of tensile structures illustrated with a selection of example projects

The Design of Building Structures Wolfgang Schueller, 1996

Rather than relying on separate literature in the fields of structural engineering architecture construction and history this text presents the field of structures holistically in terms of building and architecture

Buildings are studied

from all points of view geometrical aesthetic historical functional environmental and construction providing the broadest treatment of structures available Descriptive analytical and graphical treatment of topics are presented with nearly equal emphasis Numerous case studies throughout exemplify structural concepts and develop a feeling for structure and form instead of supporting specific architectural styles or structural acrobatics Teaching in the context of building structure and form i e low rise high rise long span etc allows students to understand structures on real not abstract mathematical terms Structural systems i e frames arches space frames soft shells etc and how they aid in making space and enhancing the formal presentation of a structure are discussed in detail Chapter 3 deals with approximate design methods for steel wood reinforced concrete and prestressed concrete according to the **The Theory of Strains in Girders and Similar Structures** Bindon Blood Stoney,1873 *Concrete, Plain and Reinforced ...: Theory and design of concrete and reinforced structures* Frederick Winslow Taylor,Sanford Eleazer Thompson,Edward Smulski,Henry Chandler Robbins,1925 **Atrium Buildings** Richard Saxon,1986 **26th Structures, Structural Dynamics, and Materials Conference: Structural, materials and design engineering** ,1985 **Tensioned Fabric Structures** Ronald E. Van Laethem,Edgard Backx,1987-03-31 In recent years powerful engineering workstations for a reasonable price become a valuable tool for the design of complicated constructions such as shell and spatial structures This availability causes an increasing use of advanced numerical techniques for the static and dynamic analysis of these structures also in the non linear range The I A S S Working Group nO 13 concerned with Numerical Methods in Shell and Spatial Structures and the Department of Civil Engineering of the Katholieke Universiteit Leuven have taken the initiative to organise an International Symposium providing a forum for discussion and exchange of views between researchers specialists in numerical analysis on one hand and designers practising engineer ings on the other hand These Proceedings contain the papers presented at the Symposium held in Leuven July 14 16 1986 The papers are organised in five sections 1 Shell structures 2 Spatial structures 3 Dynamic analysis 4 Non linear analysis 5 Presentation and interpretation of results The papers covering more than one domain are classified following the main subject We hope that researchers as well as practising engineers will find a lot of useful information in the book Architectural Graphic Standards Charles George Ramsey,Harold Reeve Sleeper,2000 With new features such as expanded design guidelines and new information on international building standards this tenth edition will keep architects and design professionals up to date with over 50 percent new material from the previous edition Illustrations *Theory of Structure* Arthur Morley,1918 **Physics** Henry Smith Carhart,Horatio Nelson Chute,1917
