Whately

Smith, 2022-07-21 W Whately Smith's *A Theory of the Mechanism of Survival The Fourth Dimension and Its Applications* offers a thought provoking exploration of the integration between the established geometrical understanding of dimensions and the mystical realm of psychical research. Employing a concise and accessible narrative style, Smith elucidates the basic principles of flatland, a metaphor for two dimensional space, and extrapolates the possibility of a fourth spatial dimension beyond our current perceptual limitations. This ambitious text situates itself within the literary tradition that marries scientific inquiry with speculative thought as it postulates a fundamental hypothesis necessary for explaining phenomena that lie at the fringes of empirical research and human comprehension. W Whately Smith's background might reveal a profound fascination with both the empirical and the metaphysical, leading to his unique interdisciplinary approach. His erudition likely informs his endeavor to construct a conceptual bridge between the tangible world and the enigmatic concept of survival after death. This book may reflect a synthesis of his deep understanding of dimensional theory and avid interest in expanding the horizons of conventional science through speculative and theoretical frameworks. *A Theory of the Mechanism of Survival The Fourth Dimension and Its Applications* is recommended for readers who are drawn to the intersection of geometry, physics, and the paranormal. It caters to those who appreciate not only rigorous thought experiments but also the contemplation of existential mysteries. W Whately Smith invites scholars, students, and intellectually curious individuals alike to delve into a hypothesis that could potentially redefine the boundaries of our understanding of reality and our place within it. *The Emergence of the Fourth Dimension* Mark Blacklock, 2018-04-05 *The Emergence of the Fourth Dimension* describes the development and proliferation of the idea of higher dimensional space in the late nineteenth and early twentieth centuries. An idea from mathematics that was appropriated by occultist thought, it emerged in the fin de siècle as a staple of genre fiction and influenced a number of important Modernist writers and artists. Providing a context for thinking of space in dimensional terms, the volume describes an active interplay between self-fashioning disciplines and a key moment in the popularisation of science. It offers new research into spiritualism and the Theosophical Society and studies a series of curious hybrid texts. Examining works by Joseph Conrad, Ford Madox Ford, H. G. Wells, Henry James, H. P. Lovecraft, and others, the volume explores how new theories of the possibilities of time and space influenced fiction writers of the period and how literature shaped and was in turn shaped by the reconfiguration of imaginative space occasioned by the n-dimensional turn. A timely study of the interplay between philosophy, literature, culture, and mathematics, it offers a rich resource for readers interested in nineteenth century literature, Modernist studies, science fiction, and gothic scholarship. **Geometry of Four Dimensions** Andrew Russell Forsyth, 1930 **The Fourth Dimension** Edward Hope Neville, 1921 **A Theory of the Mechanism of Survival** Whately Carington, 1920
