COGNITIVE DEVELOPMENT THEORY ZHI CHENG,2019-11-04

Most recently people have achieved great success in researching artificial neural network technology in the field of artificial intelligence Can we draw inspiration from the theory and techniques of artificial neural networks to study human brain neural networks Some researchers have already noticed this and got certain achievements But the achievements have been scattered into many academic journals around the world and it is difficult for readers to obtain a complete message In addition from the perspective of the current achievements it seems that only using of artificial neural network theory and technology to study human brain cognitive processes is not enough The synthesis of knowledges in cognitive science physics computer science and education is required How to integrate these interdisciplinary knowledges is also a major challenge to the study of human brain neural networks Therefore it is necessary to write a book that can synthesize the latest achievements in related fields A fully interconnected neural network is used to build a simplified model of the brain neural network in this book And then the program simulation approach is used to analyze the laws of cognition A more comprehensive understanding of the law of cognitive development of a person s life can be reached by combining with macroscopic dynamic analysis
