plastics are those which are replacing conventional materials such as metals and alloys in general engineering In addition the  
term engineering plastic covers materials that have superior properties which were not particularly available in conventional  
polymeric materials such as the exceptionally high heat resistance of polyimides and polysulfides In addition to conventional  
materials engineering polymers include materials as diverse as polyether ether ketone polyimide polyetherimide and  
polysulfides and polysulfides Engineering polymers can be reinforced by the inclusion in their formulations of glass fibres  
carbon fibres and nanotubes which produce appreciable improvements in mechanical and thermal properties The book aims  
to provide a complete coverage of the types of plastics which are now increasingly being used in engineering in applications  
as diverse as gears aircraft body construction micro electronics and extreme high temperature applications steel  
replacement and artificial hip joints The book also intends to provide a complete review of the use of polymers in engineering  
The mechanical electrical and thermal properties of polymers are discussed as are other diverse applications such as solvent  
and detergent resistance frictional and hardness properties food packaging applications and gas barrier properties In  
addition a very important application is discussed of the resistance of plastics to gamma and other forms of radiation namely  
their use in nuclear industry medical applications and food sterilisation The book will be of interest to those at all levels who  
are concerned with general engineering building automotive aerospace electronics mechanical and nuclear industries It will  
also be of interest as a source book to materials scientists those concerned with the development of new materials and
