addition an adaptive weight feature extraction module is proposed to enhance underwater object detection by capturing relevant and discriminative information to enhance feature extraction further We integrate a dedicated small object detection head into the detection network to overcome the challenges associated with detecting small objects in complex underwater scenarios This component focuses on effectively identifying and localizing small objects leading to improved overall detection accuracy Extensive experiments conducted on the detection underwater objects dataset demonstrate that the proposed AWF YOLO achieves significant performance improvements thus making it highly suitable for complex and dynamic underwater scenarios
