Understanding Radar Systems Simon Kingsley, Shaun Quegan, 1999 What is radar What systems are currently in use How do they work Understanding Radar Systems provides engineers and scientists with answers to these critical questions focusing on actual radar systems in use today It s the perfect resource for those just entering the field or a quick refresher for experienced practitioners The book leads readers through the specialized language and calculations that comprise the complex world of modern radar engineering as seen in dozens of state of the art radar systems The authors stress practical concepts that apply to all radar keeping math to a minimum Most of the book is based on real radar systems rather than theoretical studies The result is a valuable easy to use guide that makes the difficult parts of the field easier and helps readers do performance calculations quickly and easily

Understanding Radar Harry Cole, 1993-01-18 This book aims to close the understanding gap between the user and designer of radar The revised edition deals with new developments including tracking by radar past and future likely positions alternative radar techniques and an update on secondary surveillance radar

Remote Sensing Image Processing Algorithms for Detecting Air Turbulence Patterns Maged Marghany, 2024-11-22 Injuries due to air turbulence has increased recently therefore there is considerable concern and interest in understanding and detecting it more accurately Presently hardly any research deals with air turbulence detection using remote sensing images Most works use conventional optical remote sensing data with classical methods such as a library spectral signature band ratio and principal component analysis without designating new methods and technology Very little research has attempted to implement optical and microwave remote sensing images for air turbulence detections This book provides new image processing procedures for air turbulence detection using advanced remote sensing images and quantum image processing Currently there is a huge gap between research work in the field of air turbulence detection and advanced remote sensing technology Most of the theories are not operated in terms of software modules Most of the software packages in the field of remote sensing images cannot deal with advanced image processing techniques in air turbulence detections due to heavy mathematics work In this view this book fills a gap between advanced remote sensing technology and air turbulence detection For instance quantum image processing with a new generation of remote sensing technology such as RADARSAT 2 SAR images is also implemented to provide accurate air turbulence detections

Principles of Integrated Maritime Surveillance Systems A. Nejat Ince,2000 Information is always required by organizations of coastal states about the movements identities and intentions of vessels sailing in the waters of interest to them which may be coastal waters straits inland waterways rivers lakes or open seas This interest may stem from defense requirements or from needs for the protection of off shore resources enhanced search and rescue services deterrence of smuggling drug trafficking and other illegal activities and or for providing vessel traffic services for safe and efficient navigation and protection of the environment To meet these needs it is necessary to have a well designed maritime surveillance and control system capable of tracking ships and providing other types of information required by a variety of user groups ranging from port authorities shipping companies marine exchanges to governments and the military Principles of Integrated Maritime Surveillance Systems will be of vital interest to anyone responsible for the design implementation or provision of a well designed maritime surveillance and control system capable of tracking ships and providing navigational and other types of information required for safe navigation and efficient commercial operation Principles of Integrated Maritime Surveillance Systems is therefore essential to a variety of user groups ranging from port authorities to shipping companies and marine exchanges as well as civil governments and the military
