Water Management:

Water Resources Management Plan for the Northwest Florida Water Management District: Policies and programs Northwest Florida Water Management District (Fla.),1979 The Everglades Experiments Curtis Richardson,2008-03-12 In the late 1960s I worked as a graduate teaching assistant in plant ecology for the late Dr John Henry Davis at the University of Florida On one of our visits to the Everglades he mentioned to me that he had been studying problems of the Everglades since the early 1930s and that rapid growth in Florida unless checked was about to doom the Everglades He hoped his vegetation survey of the Everglades and his v etation map could someday be used to help restore the Everglades to some semblance of what it had been prior to the turn of the century These long forgotten discussions with Dr Davis were rekindled when during a wetland conference in Orlando Florida in the late 1980s I was asked what might be responsible for the reported massive invasion of cattails that had been noted during the past decade in the Everglades Several hypotheses were presented at the meeting including some preliminary data on the significant inputs of nutrients from agricultural lands and Lake Okeechobee to the north The shifts in the hydrologic conditions and flow patterns of the existing Everglades were also mentioned Because of the extensive work on phosphorus and nutrient retention then being done at the Duke University Wetland Center I was asked in early 1989 to do a preliminary survey and analysis of the ecological status of the Everglades From this early work carried out by Dr U.S. Geological Survey Circular ,1984 Total Water Management Neil S. Strategies of American Water Management Gilbert White, 2025-10-01

In a country of parching drought stinking streams and muddy floods to use the author's words the management of America's water resources is and promises to remain a vital national issue Yet while there exist many proposed plans and normative studies in the field of water management little attention has been devoted to the analysis of decisions which have actually been made and the projects which have actually been undertaken As Dr White observes it is not common to analyze water resource activity in terms of the character of decisions made and the strategies they reflect The theme of this volume is that by examining how people make their choices in managing water from place to place and time to time we can deepen our understanding of the process of water management and thereby aid in finding more suitable ends and means of manipulating the natural water system

In *Strategies of American Water Management* Dr White outlines a framework in which society's decisions as to water management may be examined and then discusses six of the major strategies which have been practiced in the United States Of each strategy the author asks Who makes what choices What is the effect upon the public welfare What is the effect upon the environment Drawing on personal experience with national and regional water planning efforts Dr White in his analysis points up an emerging shift in man's attitude toward nature the replacement of the view of man as conqueror by the view of harmonizer and co-operator This penetrating and informed study by an acknowledged authority in the field constitutes an important contribution toward the intelligent and responsible solution of the problem of American water management

Water Management: the Decision Making Process Dr. Randy White, 2014-01-30

The scarcity of potable water in both urban and rural settings requires that key decision makers in water management explore innovative and timely solutions However the range of solutions currently under consideration are not well understood or

documented in the literature To fill this gap this study used in depth semi structured open ended interviews n 7 to explore water managers knowledge and reasoning about solutions to water shortage including practical considerations about cost and sustainability of water conservation and conversion Findings revealed that water managers knowledge of potential solutions largely revolve around conservation and desalination of brackish water to produce short term potable water Water managers recommend that investment in and expansion of existing desalination technologies like reverse osmosis constitute a promising solution to the growing crisis of global water shortages This study provided a preliminary understanding of practical barriers and facilitators considered by water managers in their search for long term water management solutions
