Ward,Raphael Torquebiau,Hua Xie,2016 Dryland regions in Sub Saharan Africa are home to one half of the region s  
population and three quarters of its poor Poor both in natural resources and in assets and income the inhabitants of drylands  
are highly vulnerable to droughts and other shocks Despite a long history of interventions by governments development  
agencies and civil society organizations there have been no sustained large scale successes toward improving the resilience  
of drylands dwellers *Improved Agricultural Water Management for Africa s Drylands* describes the extent to which  
agricultural water management interventions in dryland regions of Sub Saharan Africa can enhance the resilience and  
improve the well being of the people living in those regions proposes what can realistically be done to promote improved  
agricultural water management and sets out how stakeholders can make those improvements After reviewing the current  
status of irrigation and agricultural water management in the drylands the authors discuss technical economic and  
institutional challenges to expanding irrigation A model developed at the International Food Policy Research Institute is used  
to project the potential for irrigation development in the Sahel Region and the Horn of Africa The modeling results show that  
irrigation development in the drylands can reduce vulnerability and improve the resilience of hundreds of thousands of  
farming households but rainfed agriculture will continue to dominate for the foreseeable future Fortunately many soil and  
water conservation practices that can improve the productivity and ensure the sustainability of rainfed cropping systems are  
available The purpose of this book is to demonstrate the potentially highly benefi cial role of water and water management in  
drylands agriculture in association with agronomic improvements market growth and infrastructure development and to  
assess the technological and socioeconomic conditions and institutional policy frameworks that can remove barriers to  
adoption and allow wide scale take up of improved agricultural water management in the dryland regions of Sub Saharan
