Project Management and Managing Threats to High-Tech Product Development and Manufacturability Alan D.

Smith,2026-01-21 It has been estimated that over 30 000 new products hit the marketplace annually but less than 95% are actually successful in the long run As global competition increases these numbers will only grow larger In this emerging age of high tech and commercialization at a global scale windows are ever decreasing to be competitively creative as firms are rapidly producing new products Deciding how to stay on track to produce these products while enhancing designs for ease of manufacturing and distribution are essential to have a successful product As ideas move from innovation to commercialization project teams and their successful coordination and integration are important elements in this mix Marketing engineering and other business professionals must navigate the internal and external threats for successful product designs that meet their needs but still enhance their distribution ease of access and manufacturability Using the concepts of dependency and complexity theories combined with human resources and examination of the traditional barriers to productivity in new products design they were empirically tested in the high tech industry namely smart cards and compared to leading research in the discipline Subject Guide to Books in Print ,1996 *Forthcoming Books* Rose Arny,1996-06 *Books In Print 2004-2005* Ed Bowker Staff,Staff Bowker, Ed,2004 **Science Reporter** ,2002
