Erasing Death Sam Parnia, Josh Young, 2013-02-26 An examination of near death experiences the science of resuscitation medicine and the bigger questions about what happens to the human mind after death Contrary to popular belief death is not a moment in time such as when the heart stops beating respiration ceases or the brain stops functioning Death rather is a process a process that can be interrupted well after it has begun Innovative techniques such as drastically reducing the patient's body temperature have proven to be effective in revitalizing both the body and mind but studies show they are only employed in approximately half of the hospitals throughout the United States and Europe In Erasing Death Dr Sam Parnia presents cutting edge research from the front line of critical care and resuscitation medicine that has enabled modern doctors to routinely reverse death while also shedding light on the ultimate mystery what happens to human consciousness during and after death Parnia reveals how medical discoveries focused on saving lives have also inadvertently raised the possibility that some form of afterlife may be uniquely ours as evidenced by the continuation of the human mind and psyche in the first few hours after death Questions about the self and the soul that were once relegated to theology philosophy or even science fiction are now being examined afresh according to rigorous scientific research With physicians such as Parnia at the forefront we are on the verge of discovering a new universal science of consciousness that reveals the nature of the mind and a future where death is not the final defeat but is in fact reversible
