## **The Price Of Access:**

Access Points Sean D. Ehrlich, 2011-09-26 Access Points develops a new theory about how democratic institutions influence policy outcomes Access Point Theory argues that the more points of access that institutions provide to interest groups the cheaper lobbying will be and thus the more lobbying will occur This will lead to more complex policy as policymakers insert specific provisions to benefit special interests and if one side of the debate has a lobbying advantage to more biased policy as the advantaged side is able to better take advantage of the cheaper lobbying This book then uses Access Point Theory to explain why some countries have more protectionist and more complex trade policies than other why some countries have stronger environmental and banking regulations than others and why some countries have more complicated tax codes than others In policy area after policy area this book finds that more access points lead to more biased and more complex policy Access Points provides scholars with a powerful tool to explain how political institutions matter and why countries implement the policies they do Implications of Ultra-Low-Cost Access to Space Todd Harrison, Andrew Hunter, Kaitlyn Johnson, Thomas Roberts, 2017-04-03 Since the advent of the space age a primary constraint on military commercial and civil space missions has been the cost of launch Launching objects into space requires substantial investments in launch systems and infrastructure which has restricted the market to only a handful of national governments and several large private companies This study explores the possibility of a space industry significantly less constrained by the cost of access to space *The Scots Revised Reports* Alexander Dunlop, 1903 **Universal Service** United States. **Supreme Court, Appellate Division- First Department**, **Competition and Cross-subsidization in the Telephone Industry** Leland L. Johnson, Rand Corporation, 1982 The purposes of this study are 1 to show why the Federal Communications Commission has permitted progressively greater competition in interstate telephone services 2 to assess the Commission's ability to handle problems of cross subsidization that have arisen from competition by drawing from the history of its major rate investigations 3 to trace the policy implications of this experience for the continued rate regulation of interstate telephone service and 4 to examine the conflict between economic efficiency and the desire to maintain low local telephone rates a conflict exacerbated by the fact that competition makes less sustainable the subsidization of local service by interstate services
