**A Process for Transitioning to Object-Oriented Technology** ,1995 The use of object oriented technology OOT to develop software is becoming increasingly popular Organizations unfamiliar with OOT may be ready to investigate whether the technology can provide them with significant improvements over present software development capabilities While OOT is not the solution to every software development problem it does offer the potential for improving productivity and quality The purpose of this document is to provide a suggested approach for an organization that wants to transition object oriented techniques into its software development process It describes a process for introducing and transitioning OOT to an organization The process uses a pilot project as the primary mechanism for introducing OOT into the organization The pilot project or a small number of such projects will provide sufficient OOT exposure to determine how suitable the technology is to the organization The use of a pilot project captures important feedback for future potential projects and the risks inherent in evaluating any new technology are isolated *Ada: Moving Towards 2000* Jan Katwijk,1992-05-25 Software engineering and the language Ada are playing a major role in the development of software and software technology for the new century The 11th Ada Europe conference shows that Ada has matured from a language mainly of researchers and academics in the early 1980s into a full grown tool in software engineering practice This volume contains a selection of contributions to the conference They demonstrate that Ada is very beneficially used in many software development projects and is gradually becoming accepted on the scale it deserves Papers have been selected that show that Ada is indeed ripened in all aspects of software engineering A variety of topics is addressed management economics practical experiences numerics and the use of Ada for real time and distributed systems *Object-oriented Software Development* John D.
