[Narratives of Low-Carbon Transitions \(Open Access\)](#) Susanne Hanger-Kopp, Jenny Lieu, Alexandros Nikas, 2019-02-21 This book examines the uncertainties underlying various strategies for a low carbon future Most prominently such strategies relate to transitions in the energy sector on both the supply and the demand side At the same time they interact with other sectors such as industrial production transport and building and ultimately require new behaviour patterns at household and individual levels Currently much research is available on the effectiveness of these strategies but in order to successfully implement comprehensive transition pathways it is crucial not only to understand the benefits but also the risks Filling this gap this volume provides an interdisciplinary conceptual framework to assess risks and uncertainties associated with low

carbon policies and applies this consistently across 11 country cases from around the world illustrating alternative transition pathways in various contexts The cases are presented as narratives drawing on stakeholder driven research efforts They showcase diverse empirical evidence reflecting the complex challenges to and potential negative consequences of such pathways Together they enable the reader to draw valuable lessons on the risks and uncertainties associated with choosing the envisaged transition pathways as well as ways to manage the implementation of these pathways and ultimately enable sustainable and lasting social and environmental effects This book will be of great interest to students scholars and practitioners of environmental and energy policy low carbon transitions renewable energy technologies climate change action and sustainability in general
