Handbook of Network and System Administration Jan Bergstra, Mark Burgess, 2011-08-11. System administration is about the design, running, and maintenance of human-computer systems. Examples of human-computer systems include business enterprises, service institutions, and any extensive machinery that is operated by or interacts with human beings. System administration is often thought of as the technological side of a system, the architecture, construction, and optimization of the collaborating parts, but it also occasionally touches on softer factors such as user assistance, help desks, ethical considerations in deploying a system, and the larger implications of its design for others who come into contact with it. This book summarizes the state of research and practice in this emerging field of network and system administration in an anthology of chapters written by the top academics in the field. The authors include members of the IST EMANICS Network of Excellence in Network Management.
