Spouted and Spout-Fluid Beds Norman Epstein, John R. Grace, 2010-12-23 Since the pioneering text by Mathur and Epstein over 35 years ago much of the work on this subject has been extended or superseded producing an enormous body of scattered literature This edited volume unifies the subject pulling material together and underpinning it with fundamental theory to produce the only complete up to date reference on all major areas of spouted bed research and practice With contributions from internationally renowned research groups this book guides the reader through new developments insights and models The hydrodynamic and reactor models of spouted and spout fluid beds are examined as well as such topics as particle segregation heat and mass transfer mixing and scale up Later chapters focus on drying particle coating and energy related applications based on spouted and spout fluid beds This is a valuable resource for chemical and mechanical engineers in research and industry

all areas of technology at all length scales and flow regimes and can involve compressible or incompressible linear or nonlinear fluids However although they are ubiquitous multiphase flows continue to be one of the most challenging areas of computational mechanics with numerous problems as yet unsolved Advanced computational and experimental methods are often required to solve the equations that describe such complex problems The many challenges that must be faced in solving them include modelling nonlinear fluids modelling and tracking interfaces dealing with multiple length scales characterising phase structures and treating drop break up and coalescence It is important to validate models which calls for the use of expensive and difficult experimental techniques This book presents contributions on the latest research in the techniques for solving multiphase flow problems presented at the seventh in a biennial series of conferences on the subject that began in 2001 Featured topics include Flow in porous media Turbulent flow Multiphase flow simulation Image processing Heat transfer Atomization Interface behaviour Oil and gas applications Experimental measurements Energy applications Biological flows Micro and macro fluids Compressible flows
