programmer can invoke the messaging services of IBM s MQSeries Progress Software s SonicMQ and other popular messaging product vendors In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2 0 and discusses integration of messaging into J2EE **SQL Fundamentals** Mem Lnc,Richard Baker,2020-10-06 SQL Structured Query Language is the programming language that we use to communicate with databases Through this language we can store data in a database and then change it delete it and retrieve it It s a powerful tool that virtually every company in the world relies on in some way What is SQL SQL stands for Structured Query Language and can be pronounced as SQL or sequel Structured English Query Language Defined SQL is a query language used for accessing and modifying information in one or more data tables and rows of a database SQL Database DesignIBM first developed SQL in 1970s Also it is an ANSI ISO standard It has become a Standard Universal Language used by most of the relational database management systems RDBMS Some of the RDBMS systems are Oracle Microsoft SQL server Sybase etc Most of these have provided their own implementation extensions thus enhancing their RDBMS system features and making it a powerful tool These RDBMS systems all use the popular SQL commands SELECT UPDATE DELETE INSERT WHERE in similar format SQL Database TableSQL database is constructed of a number of tables In a business SQL tables would be used to divide and simplify the different areas of the operation Table for Customers one for Vendors Employees and so on SQL Database Table ColumnsEach SQL table is made up of a number of columns referred to as fields and run along the top of the table Sql columns or fields have their content object data info defined into character types such as text date numeric integer length to name a few SQL Database Table RowsEach SQL table row referred to a record is located in the left column of the table Sql record row will contain a string of data containing data matching up to each column field across the top So in a Customer table each customer record would consist of one row with data for the customer ID number customer name address phone email and so on Click add to cart to learn how to take advantage of the powers of SQL and learn to wield them yourself **Incident Response** Kenneth R.
