Teaching Mathematics In Multilingual Classrooms:

Teaching and Learning Mathematics in Multilingual Classrooms Anjum Halai, Philip Clarkson, 2015-12-17 Contemporary concerns in mathematics education recognize that in the increasingly technological and globalized world with concomitant change in population demographics e.g. immigration, urbanization and a change in the status of languages e.g. English as a dominant language of science and technology, multilingualism in classrooms is a norm rather than an exception. Shifts in perspective also view language not simply as an instrument for cognition with all learners equipped with this instrument in service of learning, although clearly in the classroom that remains of importance. Rather, it is now also being acknowledged that language use is inherently political so that the language that gets official recognition in the classroom is invariably the language of the powerful elite or the dominant societal language or, in the case of post-colonial contexts, the language of the colonisers. From this socio-political role of language in learning, quite different issues arise for teaching, learning and curriculum for linguistically marginalized learners than that of cognition e.g. immigrants, second language learners, etc. Policies on language in education are being considered and re-considered with specific reference to mathematics teaching and learning. Given the policy environment globally, the proposed publication is timely. This edited collection draws on recent emerging insights and understandings about the approaches to improving policy and practice in mathematics education and mathematics teacher education in multilingual settings. It presents and discusses critically examples of work from a range of contexts and uses these examples to draw out key issues for research in education in language diverse settings including teaching, learning, curriculum and fit these with appropriate policy and equity approaches. With contributions from all over the world, especially novice researchers in low income countries, this book is a valuable resource for courses in Mathematics Education and related social sciences both at the graduate and undergraduate levels as well as for students of international development.

Modeling School Mathematics Teaching in Initial Teacher Training Colleges for Multilingual Classrooms Nancy Chitera, 2011 In this article the author presents a discussion of how mathematics teacher educators model school mathematics teaching in initial teacher training colleges as they prepare the student teachers to teach mathematics in multilingual classrooms in Malawi In particular the article examines the instructional practices that mathematics teacher educators produce as they train student teachers who are going to teach mathematics in multilingual classroom The study subjects were four mathematics teacher educators from two different initial teacher training colleges in Malawi The research instruments included classroom observations pre observation and reflective interviews and focus group discussions Data were collected during their residential sessions in January and February 2007 Using three levels of critical discourse analysis Fairclough 1989 2003 the research findings indicate that the mathematics teacher educators demonstrated the procedural discourse in all their instructional practices produced in their college mathematics classrooms Furthermore the results showed that some of the discourse practices being displayed in a college mathematics classroom mutually reinforce the discourses that the mathematics teacher educators display for school mathematics teaching in a multilingual mathematics classroom The study recommends that to assist the student teachers a certain action needs to be taken by the mathematics teacher educators This research was supported by TWOS NRF through the supervisor Prof M Setati and The University of Malawi The Polytechnic
