The Blind Cave Leo Katcher,1966-07-13 **The Fauna of Mayfield's Cave** Arthur Mangun Banta,1907 *Biology and Evolution of the Mexican Cavefish* Alex Keene,Masato Yoshizawa,Suzanne Elaine McGaugh,2015-10-12 Biology and Evolution of the Mexican Cavefish features contributions by leading researchers in a comprehensive unique work that examines a number of distinct areas of biology evolution development ecology and behavior using the Mexican cavefish as a powerful model system to further understanding of basic biological processes such as eye degeneration hearing craniofacial development sleep and metabolic function These fish are currently being used to better understand a number of issues related to human health including age related blindness sleep obesity mood related disorders and aging The recent sequencing of the cavefish genome broadens the interest of this system to groups working with diverse biological systems and has helped researchers identify genes that regulate sleep eye degeneration and metabolic function Mexican cavefish are particularly powerful for the study of biological processes because these fish evolved independently in twenty nine caves in the Sierra de el Abra Region of Northeast Mexico These fish have dramatic adaptations to the cave environment and this can be used to identify genes involved in disease related traits This scholarly text will be of interest to researchers and students throughout diverse areas of biology and ecology It includes photographs of animals and behavior in laboratory and natural settings that will also increase interest and accessibility to non experts Includes a mixture of images and illustrations such as the geographical distribution of cave pools and the developmental biology of the nervous system Features a companion site with geographical maps Fills a notable gap in the literature on a topic of broad interest to the scientific community Presents the recent sequencing of the cavefish genome as a groundbreaking development for researchers working with diverse biological systems **Scientific American** ,1908 *Cave Vertebrates of America* Carl H. Eigenmann,1909 **The Biological Bulletin** Frank Rattray Lillie,Carl Richard Moore,Alfred Clarence Redfield,1920 Vols 17 21 105 contain Annual reports of the Marine Biological Laboratory for 1907 08 1952 **Nature London** ,1875 **Nature** ,1875 *The Year-book of Facts in Science and the Arts for 1875* Charles W. Vincent,1876 **The Year-book of Facts in Science and Art** ,1876 [The biology of hypogean fishes](#) Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and physiology but not so in their behavior Some of them even live in nutrient rich environments Actually one of the most overlooked facets of these animals is that there are more species of

hypogean fishes without troglomorphisms blindness depigmentation than with troglomorphic ones The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters founding effect behavioral and physiological adaptations The 86 species of troglomorphic fishes described so far belong to 18 different families many of which would hardly fit the notion that they were preadapted to conquer the underground environment Further many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors indicating that massive phenotype changes can be achieved via little genetic reorganization a reorganization that mostly affects regulatory genes These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries Hopefully this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood convergent evolution

Nature Sir Norman Lockyer,1890 **Mostly Mammals, Zoological Essays** Richard Lydekker,1903 **Evolution in the Dark** Horst Wilkens,Ulrike Strecker,2017-05-25 This book provides fascinating insights into the development and genetics of evolutionary processes on the basis of animals living in the dark such as the Astyanax cave fish Biologically functionless traits show high variability which results from neutral deleterious mutations no longer being eliminated by natural selection which normally acts to preserve functional capability These negative mutations accumulate until the traits they are responsible for become rudimentary or even lost The random genetic basis of regressive evolution is in accordance with Nei s Neutral Theory of Molecular Evolution which applies to the molecular level Such processes are particularly conspicuous in species living in constant darkness where for example in Astyanax all traits depending on the exposure to light like eyes pigmentation visually triggered aggressive behaviour negative phototaxis and several peripheral outcomes of circadian rhythmicity are useless and diminish In compensation constructive traits like taste olfaction or the lateral line senses are improved by selection and do not show variability Regressive and constructive traits inherit independently proving that the rudimentation process is not driven by pleiotropic linkage between them All these traits are subject to mosaic evolution and exhibit unproportional epistatic gene effects which play an important role in evolutionary adaptation and improvement Offering valuable evolutionary insights and supplemented by a wealth of illustrations this book will appeal to evolutionary and developmental biologists alike **Knowledge** ,1895 *The Secret Life of Fish* Doug Mackay-Hope,2021-11-02 Discover the astonishing truth about our aquatic cousins how they think and what they know their experiences and unique behaviours and the many things we have in common There are 33 000 species of fish on our planet and that number is constantly increasing In context that is more than all the species of mammals birds amphibians and
