Annual Report - John Innes Horticultural Institution John Innes Horticultural Institution, 1946 **The Man Who Invented the Chromosome** Oren Solomon HARMAN, Oren Solomon Harman, 2009-06-30 Born by mistake or connivance to struggling parents in a small Lancashire cotton town in 1903 an uninspired Darlington inadvertently escaped the obscurity of farming life and rose instead against all odds to become within a few short years the world's greatest expert on chromosomes and one of the most penetrating biological thinkers of the twentieth century Harman follows Darlington's path from bleak prospects to world fame showing how within the most miniscule of worlds he sought answers to the biggest questions how species originate how variation occurs how Nature both blind and foreboding random and insightful makes her way from deep past to unknown future But Darlington did not stop there Chromosomes held within their tiny confines untold dark truths about man and his culture This passionate conviction led the once famed Darlington down a path of rebuke isolation and finally obscurity As *The Man Who Invented the Chromosome* unfolds Darlington's forgotten tale the Nazi atrocities the Cold War the crackpot Lysenko the molecular revolution eugenics Civil Rights the welfare state the changing views of man's place in nature biological determinism all were interconnected Just as Darlington's work provoked him to ask questions about the link between biology and culture his life raises fundamental questions about the link between science and society

From Genetics to Gene Therapy D.S. Breeding Field Crops John M. Poehlman, 2013-04-17 While preparing the first edition of this textbook I attended an extension short course on writing agricultural publications The message I remember was select your audience and write to it There has never been any doubt about the audience for which this textbook was written the introductory course in crop breeding In addition it has become a widely used reference for the graduate plant breeding student and the practicing plant breeder In its preparation particular attention has been given to advances in plant breeding theory and their utility in plant breeding practice The blend of the theoretical with the practical has set this book apart from other plant breeding textbooks The basic structure and the objectives of the earlier editions remain unchanged These objectives are 1 to review essential

features of plant re production Mendelian genetic principles and related genetic developments applicable in plant breeding practice 2 to describe and evaluate established and new plant breeding procedures and techniques and 3 to discuss plant breeding objectives with emphasis on the importance of proper choice of objective for achieving success in variety development Because plant breeding activities are normally organized around specific crops there are chapters describing breeding procedures and objectives for the major crop plants the crops were chosen for their economic importance or diversity in breeding systems These chapters provide a broad overview of the kinds of problems with which the breeder must cope
