Tropical Ecosystems:

Tropical Ecosystems and Ecological Concepts Patrick L. Osborne, 2012-02-09 Tropical habitats cover over one third of the Earth's terrestrial surface and harbor much of its biodiversity with many areas rich in endemic species. However, these ecosystems are under significant and growing threat from issues such as deforestation, land degradation, and ocean acidification. This introductory textbook provides a comprehensive guide to the major tropical biomes. It is unique in its balanced coverage of both aquatic and terrestrial systems and in its international scope. Each chapter is built around a particular tropical ecosystem with descriptive case studies providing a framework around which ecological concepts and applied ecological topics are presented. This second edition has been thoroughly updated to reflect recent advances in the field and includes a greater focus on the impact of global climate change. The text is supported throughout by boxes containing supplementary material and is illustrated with over 200 clear, simple line diagrams, maps, and photographs.

Tropical Ecosystems Mundanthra Balakrishnan, Reidar Borgström, Stein W. Bie, 1994 **Tropical Ecosystems: Structure, Functions and Challenges in the Face of Global Change** Satish Chandra Garkoti, Skip J. Van Bloem, Peter Z. Fulé, Rajeev L. Semwal, 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem. A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems, forest degradation, extent and impacts of invasive species, plant responses to pollution, climate change impacts on biodiversity and tree phenology, environmental changes associated with land use, importance of traditional knowledge in climate change adaptation, timberline ecosystems, and role of integrated landscape modeling for sustainable management of natural resources. The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management. We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge. We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems. *Tropical Environments* Martin C. Kellman, Rosanne Tackaberry, 1997 Provides a comprehensive introduction to the complex systems of the tropics covering a broad cross-regional range of humid through to semi-arid tropical climate zones. Offers a balanced mix of biophysical and human management issues. **Tropical Ecosystems**, 2019 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem. Jones, 2019-12-06 Originally published in 1987 Conservation of Ecosystems and Species examines conservation as a major world issue for governments industrialists and the general public The need for conservation has become more urgent as human activity continues to encroach upon the remaining natural ecosystems of our planet This book examines a wide range of conservation issues and explains the scientific reasons why conservation of ecosystems and species is important not merely for its own sake but for the future of humanity It charts the development of conservation policy around the concept and understanding of the ecosystem The roles of the planner the industrialist and the politician in the development of a conservation policy are described **Tropical Ecosystems in the 21st Century**, 2020-03-18 Advances in Ecological Research Volume 62 the latest release in this ongoing series covers a long list of topics including Monitoring tropical insects in the 21st Century The distribution and structure of long term and large scale fire manipulation experiments The Agua Salud Project Basic and applied research informing management of tropical landscapes for the 21st century Conservation strategies and principles for tropical forests Assessing forest quality using satellite remote sensing data A test case using the Sabah Biodiversity Experiment eDNA approaches to understand the current state and future of biodiversity of the Amazonian biome pitfalls improvements and challenges and much more Provides information that relates to a thorough understanding of the field of ecology Deals with topical and important reviews on the physiologies populations and communities of plants and animals [Tropical Ecosystems](#) M. Balakrishnan, 1994 *Tropical Ecosystems* Walter Erdelen, Natarajan Ishwaran, Paul Müller, 1991 [Tropical Forest Ecosystem Responses to Increasing Nutrient Availability](#) Jürgen Homeier, Selene Báez, Dietrich Hertel, Christoph Leuschner, 2017-09-08 Deforestation and land use change have led to a strong reduction of tropical forest cover during the last decades Climate change will amplify the pressure to the remaining refuges in the next years In addition tropical regions are facing increasing atmospheric inputs of nutrients which will have unknown consequences for the structure and functioning of these systems no matter if they are within protected areas or not Even remote areas are expected to receive

rising amounts of nutrients The effects of higher rates of atmospheric nutrient deposition on the biological diversity and ecosystem functioning of tropical ecosystems are poorly understood and our knowledge of nutrient fluxes and nutrient limitation in tropical forest ecosystems is still limited Yet it will be of paramount importance to know the effects of increased nutrient availability to conserve these ecosystems with their biological and functional diversity During the last years research efforts have more and more focused on the understanding of the role of nutrients in tropical ecosystems and several coordinated projects have been established that study the effects of experimental nutrient addition This Research Topic combines results from experiments and from observational studies with the aim to review and conclude on our current knowledge on the role of additional nutrients in ecosystems *Trophic Models of Aquatic Ecosystems* Villy Christensen, Daniel Pauly, 1993 Tunza United Nations Environment Programme, 2003 Tunza was developed by the United Nations Environment Programme UNEP who acknowledged the need for a book to stimulate environmental action among young people Through participatory discussions and suggestions particularly from participants at the Global Youth Forum held in Denmark in March 2002 young people from around the world helped to produce a book that would provide them and their contemporaries with a reference and forum on key environmental issues The aim being to motivate and guide young people on actions they can take in their local communities to help sustainable development **Tropical Biodiversity: Why Should We Care?** Ana Maria Rocha de Almeida, Chelsea D. Specht, 2019-06-07 When we look at our planet's species distribution we observe a very interesting pattern as we move from the Poles to the Equator the number of species drastically increases This is what has been called latitudinal gradient of species diversity In short it means that tropical areas which are located between the Tropic of Cancer and the Tropic of Capricorn harbor a greater number of species than temperate areas We still don't know exactly what causes or has caused this phenomenon but we know that it resulted in high endemism that is a large number of animals and plants unique to these areas The tropical areas of the globe are an intricate patchwork of various ecosystems Tropical ecosystems can vary from rainforests to deserts from savannas to mangroves and we have a lot to learn from them However in recent years we have witnessed an increase in rates of habitat destruction particularly in the tropics Currently many tropical ecosystems are under threat as vast areas are devastated to give space to cities agriculture and cattle farms As tropical areas vanish so do species previously unknown to us as well as ecological processes specific to these environments Moreover due to its global importance devastation of tropical areas has potential impacts on other non-tropical ecosystems and may exacerbate climate change as well as influence the spread of tropical diseases On the other side of this battle there are many scientists that dedicated themselves to the study of the fascinating tropical biodiversity This collection of articles aims at highlighting their contributions to our understanding of tropical patterns and processes leading to this incredible biodiversity It focuses on the wonders of the tropical areas of the globe by asking amongst others the following questions Which species of plants and animals are found in tropical areas What can we learn about tropical ecology

and how can this knowledge help us conserve these ecosystems for future generations *Tropical Forest Ecosystems* Unesco, United Nations Environment Programme, Food and Agriculture Organization of the United Nations, 1978 Forest and woodlands form the natural type of vegetation cover in most of the humid and subhumid parts of the tropical world They are important for many reasons not least because of their role in meeting man's needs for timber food and other economic environmental and socio cultural values For many developing countries the wise use of the resources provided by tropical forests and the balanced rural development of zones covered by them lie at the heart of their national development strategies and programmes Tropical Rain Forest Ecosystems Frank B. Golley, Helmut Lieth, M. J. A. Werger, 1983 **Global Climate Change and Tropical Ecosystems** John M. Kimble, Bobby A. Stewart, 1999-12-20 Tropical ecosystems the regions between the tropics of Cancer and Capricorn play an important role in global processes economic issues and political concerns In their natural state tropical ecosystems support a large quantity of above and below ground biomass and constitute a major part of the terrestrial carbon pool Conversion of the natural ecosystem to agriculture and forestry ecosystems disturbs this ecological balance *Global Climate Change and Tropical Ecosystems* presents data on carbon pool fluxes from case studies in 12 countries in tropical regions The chapters cover Characteristics of tropical ecosystems Soil and biotic carbon pools Impacts of land use and soil management Slash and burn practices Crop residue and fertility management This volume adds to the understanding of pedospheric processes in tropical ecosystems and how to better use soils as a sink for carbon dioxide and other greenhouse gases With *Global Climate Change and Tropical Ecosystems* you will understand the link between soil productivity environmental quality and the global carbon cycle not only in these ecologically sensitive regions but worldwide *Fire Regimes and Ecosystem Properties*, 1981 Restoration of Tropical Forest Ecosystems Helmut Lieth, M. Lohmann, 1984 The destruction of the tropical forests continues rapidly We all know that this has global ecological and economic consequences The problem is of such magnitude that it can only be compared to warfare The destruction of tropical forests is both detrimental to the global ecology as well as posing a serious threat to the people living in these areas Furthermore the overutilization of such a valuable resource poses a serious threat to the next generations Besides the problem generated for the people in these regions and for the earth in general there is a moral obligation to preserve the vast biological diversity in the tropical forests We have a commitment to all species on earth as well as man and therefore need to preserve as many as possible if not all This book discusses the problem from different angles from forestry ecology and nature conservation The two main problem areas are first the wise utilization of that portion of the forest which will be used especially the introduction of planned forestry in such areas and second the development of a good plan for nature conservation in the tropics *Tropical Marine Ecology* Daniel M. Alongi, 2021-12-09 No realm on Earth elicits thoughts of paradise more than the tropics The tropical marine realm is special in myriad ways and for many reasons from seas of higher latitude in housing iconic habitats such as coral reefs snow white beaches crystal clear waters mangrove

forests extensive and rich seagrass meadows and expansive river deltas such as the exemplar the Amazon But the tropics also has an even more complex side tropical waters give rise to cyclones hurricanes and typhoons and unique oceanographic phenomena including the El Ni o Southern Oscillation which affects global climate patterns Tropical Marine Ecology documents the structure and function of tropical marine populations communities and ecosystems in relation to environmental factors including climate patterns and climate change and patterns of oceanographic phenomena such as tides and currents and major oceanographic features as well as chemical and geological drivers The book focuses on estuarine coastal continental shelf and open ocean ecosystems The first part of the book deals with the climate physics geology and chemistry of the tropical marine environment The second section focuses on the origins diversity biogeography and the structure and distribution of tropical biota The third part explores the rates and patterns of primary and secondary production and their drivers and the characteristics of pelagic and benthic food webs The fourth part examines how humans are altering tropical ecosystems via unsustainable fisheries the decline and loss of habitat and fragmentation Further pollution is altering an earth already in the throes of climate change Tropical Marine Ecology is an authoritative and comprehensive introduction to tropical marine ecology for advanced undergraduate and postgraduate students It is also a rich resource and reference work for researchers and professional managers in marine science
