Marcovitz,2012 While PowerPoint affords powerful capabilities for creating dynamic classroom lessons and enriching curriculum few educators understand how to take advantage of these builtin features The second edition of this practical guide helps educators produce creative multimedia material for their students regardless of their level of programming proficiency Powerful PowerPoint for Educators Using Visual Basic for Applications to Make PowerPoint Interactive Second Edition discusses the educational benefits of multimedia instruction and provides a review of intermediate PowerPoint skills Author David Marcovitz explains the concept of Visual Basic for Applications VBA scripting and provides progressively advanced skills and practice examples While other books that describe VBA are written in a highly technical manner this book is geared toward educators with little or no programming background and includes tips for modifying the practice examples for their own interactive multimedia projects VISUAL BASIC .NET FOR STUDENTS Vivian Siahaan,Rismon Hasiholan Sianipar,2020-08-03 In chapter one you will get to know the properties and events of each control in a Windows Visual Basic application You need to learn and know in order to be more familiar when applying them to some desktop applications in this book In Tutorial 1 1 you will build a dual mode stopwatch The stopwatch can be started and stopped whenever desired Two time traces the running time when the stopwatch is active running time and the total time since the first stopwatch was activated Two label controls are used to display the time two more labels to display title information Two button controls are used to start stop and reset the application one more button to exit the application The timer control is used to periodically every second update the displayed time In Tutorial 1 2 you will build a project so that children can practice basic skills in addition subtraction multiplication and division operations This Math Game project can

be used to choose the types of questions and what factor you want to use This project has three timing options In Tutorial 1 3 you will build Bank Code game The storage box is locked and can only be opened if you enter the correct digit combination Combinations can be 2 to 4 non repetitive digits range of digits from 1 to 9 After a guess is given you will be notified of how many digits are right and how many digits are in the right position Based on this information you will give another guess You continue to guess until you get the right combination or until you stop the game In Tutorial 1 4 you will build Horse Racing game This is a simple game Up to 10 horses will race to the finish line You guessed two horses that you thought could win the race By clicking on the Start button the race will start All horses will race speed to get to the finish line In chapter two you will learn the basic concepts of classes and objects Next it will demonstrate how to define class and type of enumeration which shows how both are used in the application In Tutorial 2 1 you will create a two level application that uses a form to pass input user to the People class The form class is the level of representation and the People class is the middle level You will add controls to the form so people can enter ID last name and their height When the user clicks the Save button the code will assign input values to the People class properties Finally you will display the People object on a label Figure below shows the form after the user clicks the Save button In Tutorial 2 2 you will add a parameterized constructor to the People class The application will ask the user to enter values which will then be passed to the People constructor Then the application will display the values stored on the People object In Tutorial 2 3 you will create an application that utilizes enumeration type The user will choose one type of account that is listed in a ListBox control and what he chooses is then displayed in a Label control In Tutorial 2 4 you will create a simple Bank application This application has one class BankAcc and a startup form In Tutorial 2 5 you will improve the simple Bank application by implementing the following two properties in the BankAcc class TotalDeposit Total money saved in current account TotalWithdraw Total funds that have been withdrawn from current account In Tutorial 2 6 you will create an application to calculate the time needed for a particular aircraft to reach takeoff speed You will also calculate how long the runway will be required For each type of aircraft you are given 1 the name of the aircraft 2 the required take off speed feet sec and 3 how fast the plane accelerates feet sec² In Tutorial 2 7 you will provide a number of programming training for those who want to improve their programming skills Your task here is to write an object oriented application so that training manager can display and edit the training services offered There are several training categories 1 Application Development 2 Database 3 Networking and 4 System Administration The training itself consists of 1 title 2 training days 3 category and 4 cost Create a class named Training that contains this information along with its properties and a ToString method In chapter three several tutorials will be presented to build more complex projects You will build them gradually and step by step In Tutorial 3 1 you will build Catching Ball game The bird flew and dropped ball from the sky User is challenged to position man under the fallen ball to catch it In Tutorial 3 2 you will build Smart Tic Tac Toe game The aim of this game is to win the game on a 3 x 3 grid with the victory of three identical symbols X or O on horizontal

diagonal or vertical lines The players will play alternately In this game given two game options player 1 against player 2 or human player against computer A smart but simple strategy will be developed for computer logic to be a formidable opponent for human In Tutorial 3 3 you will build a Matching Images game Ten pairs of images hidden on the game board The object of the game is to find image pairs In Two Players mode players will get turns in turn In One Player mode there are two options to choose from Playing Alone or Against Computer When Play Alone option is selected the player will play alone without an opponent If Against Computer option is selected then the level of computer intelligence is given with several levels according to the level of difficulty of the game In Tutorial 3 4 you will build Throwing Fire program This program can be played by two human players or human player versus computer In chapter four tutorials will be presented to build two advanced projects You will build them gradually and step by step In Tutorial 4 1 you will build Roasted Duck Delivery simulation In this simulation a number of decisions are needed The basic idea is to read the order by incoming telephone and tell the delivery scooter to go to the location of the order You also need to make sure that you always provide a roasted duck ready to be transported by the delivery scooter The delivery area is a 20 by 20 square grid The more roasted duck is sold the more profit it gets In Tutorial 4 2 you will build a Drone Simulation In this simulation you control both vertical and horizontal thrusters to maneuver the ride to the landing pad You will adjust the landing speed so that it is slow enough so that no accident occurs

The Visual Basic .Net Programming Language Paul Vick,2004 Praise for The Visual Basic NET Programming Language There is no substitute to getting the inside scoop directly from a book written by the father of a programming language such as Bjarne Stroustrup for C James Gosling for Java and Alan Cooper for the original version of Visual Basic Paul Vick the father of Visual Basic NET explains the whys and hows of this exciting new language better than any other human being on the planet Ted Pattison Barracuda NET The Visual Basic NET

Programming Language includes nuances that in all my use and study of VB NET I haven't seen discussed anywhere else. For example, I learned that you can use the Imports statement to import an Enum name so that you needn't refer to the enum in all its uses. In addition, I learned that the dictionary lookup operator works in VB NET. I thought this one had been retired. In any case, if you're searching for a book that covers all the language syntax issues and more, Paul Vick's book is a great place to look. Ken Getz, Senior Consultant, MCW Technologies, LLC. This book is an excellent stepping stone for Visual Basic developers wanting to get their toes wet in the .NET waters. Paul's presentation of the core topics all VB developers should tackle first is clear, concise, and unlike other books in the genre, does not overwhelm the reader. The VB6 vs VB .NET task-oriented approach guides you through the new language and OO features and then moves to basic threading and other CLR topics, as well as to the key points in the COM to .NET transition in a well-thought-out sequence. If you've been holding out on VB .NET, this is a great book to get you started. Klaus H. Probst, Sr. Consultant, Architect, Spherion Technology Services, Microsoft MVP. There is no shortage of VB .NET books in the market, but this is the only book straight from the creators. While that is an excellent reason in itself for reading this book, it is the brevity and clarity of the content, along with the examples that makes this book a must-have. Amit Kalani, Developer. Overall, I liked this book, and it definitely benefited me. I learned new things I didn't see anywhere else, and I'll certainly put these to good use in the future. Paul's book makes a great reference manual for intermediate and advanced VB .NET developers. Philip Williams, System Engineer, LDC Direct. This book contains a lot of great information I have seen nowhere else and addresses issues that other books do not. Ethan Roberts, NET Architect, General Casualty. This book is full of useful information and provides a good historical background for the Visual Basic .NET Language. Dave Vitter, Technical Lead, Developer, and author of *Designing Visual Basic .NET Applications*, Coriolis, 2001. The definitive Microsoft Visual Basic .NET reference, authored by Visual Basic .NET's lead architect. If you want to leverage all of VB .NET's immense power, get this book. It's the definitive VB .NET reference and tutorial, and the first Visual Basic book written by one of VB .NET's lead architects. No other book offers this much behind-the-scenes insight about why VB .NET works the way it does, how it evolved, and how you can make the most of it. *The Visual Basic .NET Programming Language* is a superb learning tool for new VB .NET programmers and a must-have reference for developers at every level. Paul Vick presents precise language descriptions, essential reference materials, practical insights, and hundreds of code samples straight from Microsoft's VB .NET design team. Just some of the features include: A history and overview of Visual Basic's evolution into VB .NET. Complete coverage of the language syntax. Transitioning from COM to the CLR and leveraging the .NET platform. Runtime functions. Taking full advantage of VB .NET's object-oriented features. Notes on style, design, and compatibility throughout the text. Notes for the advanced user throughout the text. Vick exposes VB .NET's most powerful capabilities with unprecedented depth and clarity, and packs this book with information you simply won't find anywhere else. Whether you're an experienced VB .NET programmer upgrading from earlier versions of Visual Basic or coming to Visual

Basic and NET for the first time you'll find this book indispensable *Introduction to Programming Using Visual Basic* David I. Schneider, 2019 Visual Basic has been a widely used programming language since its introduction in 1991 Its latest incarnation Visual Basic 2017 brings continued refinement of the language Visual Basic programmers are enthusiastically embracing the powerful capabilities of the language Likewise students learning their first programming language will find VB 2017 the ideal tool to understand the development of computer programs My objectives when writing this text were as follows 1 To develop focused chapters Rather than covering many topics superficially I concentrate on important subjects and cover them thoroughly 2 To use examples and exercises with which students can relate appreciate and feel comfortable I frequently use real data Examples do not have so many embellishments that students are distracted from the programming techniques illustrated 3 To produce compactly written text that students will find both readable and informative The main points of each topic are discussed first and then the peripheral details are presented as comments 4 To teach good programming practices that are in step with modern programming methodology Problem solving techniques and structured programming are discussed early and used throughout the book The style follows object oriented programming principles 5 To provide insights into the major applications of computers Provided by publisher **The Complete Visual Basic . NET Training Course** Harvey M. Deitel, Paul J. Deitel, Tem R. Nieto, 2002-05-01 Sport we might assume is one of the first casualties of war and a sport as peaceful and civilized as golf perhaps more than most But as this book shows golf has played a not insignificant part in certain wars It also highlights an extraordinary determination by certain human beings to persevere with their game of golf even in the face of the most adverse wartime conditions is both amazing and often hilarious
