Visual Processing Computational Psychophysical And Cognitive Research:

Visual Processing Roger Watt, 2022-03-01 This highly original and interesting monograph puts forward ideas on visual processing and representation in the early stages of visual perception and examines the computational requirements of the system and its psychological performance Initially the author considers the computational theory of how the maximum amount of useful information about the scene can be registered from the variations in light intensity in the retinal image He then goes on to address the question of just what it means to say that the visual system measures spatial aspects of the retinal image and the consequences of the inevitable distortions that are introduced He believes that the calculation of spatial position within a distorted metric is not trivial and requires dynamic processes with memory and control Finally Dr Wan argues that the strength of the link between the low level approaches of psychophysics and computational theory and high level approaches of cognitive visual function lies in the logic of the arguments that indicate the computational need for control This Essay will be of great interest to researchers in computer vision perception cognitive science and cognitive psychology

Visual Cognition Glyn W. Humphreys, Vicki Bruce, 2021-12-24

Vision allows us to do many things It enables us to perceive a world composed of meaningful objects and events It enables us to track those events as they take place in front of our eyes It enables us to read It provides accurate spatial information for actions such as reaching for or avoiding objects It provides colour and texture that can help us to separate objects from their background and so forth This book is concerned with understanding the processes that allow us to carry out these various visually driven behaviours In the past ten years our understanding of visual processing has undergone a rapid change primarily fostered by the convergence of computational experimental and neuropsychological work on the topic

Visual Cognition provides the first major attempt to cover all aspects of this work within a single text It provides a summary of research on visual information processing relevant to advanced undergraduates postgraduates and research workers It covers seeing static forms object recognition dynamic vision motion perception and visual masking visual attention visual memory visual aspects of reading For each topic the relevant computational experimental and neuropsychological work is integrated to provide a broader coverage than that of other texts

Visual Perception Vicki Bruce, Mark A. Georgeson, Patrick R. Green, 2014-08-27 This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever growing range of research topics in vision In Part I the treatment of visual physiology has been extensively revised with an updated account of retinal processing a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters and an up to date account of the primate visual pathway Part II contains four largely new chapters which cover recent psychophysical evidence and computational model of early vision edge detection perceptual grouping depth perception and motion perception The models

discussed are extensively integrated with physiological evidence All other chapters in Parts II III and IV have also been thoroughly updated

Biology And Computation: A Physicist's Choice Hanoch Gutfreund, Gerard Toulouse, 1994-03-04 This book provides a comprehensive review of the works in the rapidly evolving field of neural networks and brain studies Its purpose is two fold to help physicists entering this field to get a broader view of the context of the domain and to help scientists of other disciplines to reach a better understanding of the physicists contributions within a context of perspectives they can relate to Included in the volume are 68 carefully selected high quality reprints to provide the volume with both breadth and depth It is organized into 5 sections and 22 chapters both the sections and chapters being preceded by introductory comments by the editors

RTI Guide: Making It Work Concetta Russo, Ellen Morris Tiegeman, Christine K. Advances in Computer Graphics, 1991 *Higher-Order Processing in the Visual System* Gregory Bock, Jamie Goode, 1994-10-25 Foremost neurophysiologists and psychophysicists provide pertinent information on the nature of representation at the earliest stages as this will constrain the disposition of all subsequent processing This processing is discussed in several different types of visual perception
