## Weighted Bootstrap:

**The Weighted Bootstrap** Philippe Barbe, Patrice Bertail, 1995-02-24 This monograph presents an account of the asymptotic behaviour of the weighted bootstrap a new and powerful statistical technique Researchers and advanced graduate students studying bootstrap methods will find this a valuable technical survey which is thorough and rigorous The main aim of this book is to answer two questions How well does the generalized bootstrap work What are the differences between all the different weighted schemes Readers are assumed to have already some familiarity with the bootstrap but otherwise the account is as self contained as possible Proofs are presented in detail though some lengthy calculations are deferred to appendices

**The Weighted Bootstrap** Philippe Barbe, Patrice Bertail, 2012-12-06 INTRODUCTION 1 Introduction In 1979 Efron introduced the bootstrap method as a kind of universal tool to obtain approximation of the distribution of statistics The now well known underlying idea is the following consider a sample  $X$  of  $n$  independent and identically distributed  $H$  i d random variables  $r$  v s with unknown probability measure  $p$  m  $P$  Assume we are interested in approximating the distribution of a statistical functional  $T$   $P$  the  $1$   $nn$  empirical counterpart of the functional  $T$   $P$  where  $P$   $n$   $n$   $l$   $i$   $l$   $aX$  is  $1$  the empirical  $p$   $m$  Since in some sense  $P$  is close to  $P$  when  $n$  is large  $n$   $LLd$  from  $P$  and builds the empirical  $p$   $m$  if one samples  $X$   $l$   $X$   $m$   $n$   $n$   $1$   $m$   $n$   $P$   $T$   $P$  conditionally on  $m$   $n$   $l$   $i$   $1$   $a$  then the behaviour of  $P$   $m$   $n$   $m$   $n$   $n$   $X$   $1$   $T$   $P$  should imitate that of when  $n$  and  $m$  get large  $n$  This idea has lead to considerable investigations to see when it is correct and when it is not When it is not one looks if there is any way to adapt it

**Essentials of Statistical Inference** G. A. Young, R. L. Smith, Richard L. Smith, 2005-07-25 Aimed at advanced undergraduates and graduate students in mathematics and related disciplines this engaging textbook gives a concise account of the main approaches to inference with particular emphasis on the contrasts between them It is the first textbook to synthesize contemporary material on computational topics with basic mathematical theory

*Survival Analysis in Medicine and Genetics* Jialiang Li, Shuangge Ma, 2013-06-04 Using real data sets throughout *Survival Analysis in Medicine and Genetics* introduces the latest methods for analyzing high dimensional survival data It provides thorough coverage of recent statistical developments in the medical and genetics fields The text mainly addresses special concerns of the survival model After covering the fundamentals it discusses interval censoring nonparametric and semiparametric hazard regression multivariate survival data analysis the sub distribution method for competing risks data the cure rate model and Bayesian inference methods The authors then focus on time dependent diagnostic medicine and high dimensional genetic data analysis Many of the methods are illustrated with clinical examples Emphasizing the applications of survival analysis techniques in genetics this book presents a statistical framework for burgeoning research in this area and offers a set of established approaches for statistical analysis It reveals a new way of looking at how predictors are associated with censored survival time and extracts novel statistical genetic methods for censored survival time outcome from the vast amount of research results in genomics

*Fractional Random Weighted Bootstrapping for Classification on Imbalanced Data with Ensemble Decision Tree Methods* Sean Charles Carter, 2019 Ensemble methods are commonly used for building predictive models for classification Models that are unstable to perturbations in the training set such as the decision tree often see considerable reductions in error when grouped using bootstrapped resamples of the training data to train many models The non parametric bootstrap however has limited efficacy when used on severely imbalanced data especially when the number of observations of one or more classes is exceptionally small We explore the fractional random weighted bootstrap which randomly assigns fractional weights to observations as an alternative resampling procedure in training machine learning ensembles particularly decision tree ensembles We carry out a methodological study comparing the standard bagging and random forest ensemble models for decision trees against their fractionally random weighted alternatives finding some evidence supporting their use on data with severe imbalance      Statistical Methods for Complicated Current Status and High-dimensional Data Structures with Applications in Environmental Epidemiology Jessica Gerald Young, 2007      Actes de la Session International Statistical Institute, 1991      *Bulletin de L'Institut International de Statistique* ,1991      *American Journal of Botany* ,2001      **Annales d'économie et de statistique** ,1997      Statistical Theory and Method Abstracts ,2001      *Statistica Sinica* ,2009
