Structural Connections for Lightweight Metallic Structures Pedro M.G.P. Moreira, Lucas F. M.

da Silva, Paulo M.S.T. de Castro, 2012-02-03 Increasing concern with fuel consumption leads to widespread interest in lightweight structures for transportation vehicles Several competing technologies are available for the structural connections of these structures namely welding mechanical fastening riveting and adhesive technologies Arranged in a single volume this work is to presents state of the art discussions of those aspects and processes presenting greater novelty whilst simultaneously keeping wide applicability potential and interest The topics chosen have the common feature of being of currently applied in lightweight structures and one of the characteristics of this work is bringing together relevant state of the art information usually presented in separate publications specializing in a single technology The book provides discussions and examples of concrete applications so that it appeals to researchers and designers and engineers involved in the design and fabrication of lightweight structures

**Welding Technology** Anup Goel, 2020-12-01 Welding is a fabrication process that joins materials usually metals by using high heat to melt the parts together and allowing them to cool causing fusing Many different energy sources can be used for welding including gas flame electric arc a laser and electron beam friction and ultrasonic This book includes various methods of welding and design of weld joints weldability and testing of weldments Welding technology also includes latest and newer techniques for welding Our hope is that this book through its careful explanations of concepts and its use of numerous examples sketches and figures bridges the gap between knowledge and proper application of that knowledge
