**Giving Good Weight** John McPhee, 1979-11-26 You people come into the market the Greenmarket in the open air under the down pouring sun and you slit the tomatoes with your fingernails With your thumbs you excavate the cheese You choose your stringbeans one at a time You pulp the nectarines and rape the sweet corn You are something wonderful you are people of the city and we who are almost without exception strangers here are as absorbed with you as you seem to be with the numbers on our hanging scales So opens the title piece in this collection of John McPhee's classic essays grouped here with four others including Brigade de Cuisine a profile of an artistic and extraordinary chef The Keel of Lake Dickey in which a journey down the whitewater of a wild river ends in the shadow of a huge projected dam a report on plans for the construction of nuclear power plants that would float in the ocean and a pinball shoot out between two prizewinning journalists

A Course on the Stresses in Bridge and Roof Trusses, Arched Ribs and Suspension Bridges William Hubert Burr, 1883 *Guidance for Good Bridge Design* fib Fédération internationale du béton, 2000-01-01 Addressed to designers and even more so to owners and project managers this part is meant as a guide to an efficient selection of designers and contractors and to the preparation of fair contracts providing high quality at reasonable cost Clearly a good design must be paid for at its real cost economising on the design cost can be extremely counterproductive for the owner when considering the final whole life cost of the project In addition it was considered very important to address the designer's responsibilities and relations with other participants in large projects and finally design philosophy itself Part 2 Design and construction aspects This more technical part is mainly addressed to bridge designers and devoted to a systematic analysis of structural and constructional bridge concepts Considering the importance of erection techniques in the development of bridge design this second part of the guide starts by a description of the different construction methods their advantages and draw backs their particularities and of course by defining the domain of their most efficient applications Another main chapter is devoted to the proper design of cross sections And finally a third main chapter deals in detail with the influence of construction techniques on design
