## **World View Of Physics:**

**A Yupiaq Worldview** Angayuqaq Oscar Kawagley, 2006-02-17 Oscar Kawagley is a man of two worlds walking the sometimes bewildering line between traditional Yupiaq culture and the Westernized Yupiaq life of today. In this study Kawagley follows both memories of his Yupiaq grandmother who raised him with the stories of the Bear Woman and respectful knowledge of the reciprocity of nature and his own education in science as it is taught in Western schools. Kawagley is a man who hears the elders' voices in Alaska and knows how to look for the weather and to use the land and its creatures with the most delicate care. In a call to unite the two parts of his own and modern Yupiaq history, Kawagley proposes a way of teaching that incorporates all ways of knowing available in Yupiaq and Western science. He has traveled a long journey but it ends where it began in a fishing camp in southwestern Alaska, a home for his heart and spirit. The second edition examines changes that have impacted the Yupiaq and other Alaska Native communities over the last ten years, including implementation of cultural standards in indigenous education and the emergence of a holistic approach in the sciences.

**Quantum Brain Dynamics and Consciousness** Mari Jibu, Kunio Yasue, 1995-10-27 This introduction to quantum brain dynamics is accessible to a broad interdisciplinary audience. The authors, a brain scientist and a theoretical physicist, present a new quantum framework for investigating advanced functions of the brain such as consciousness and memory. The book is the first to give a systematic account founded in fundamental quantum physical principles of how the brain functions as a unified system. It is based on the quantum field theory originated in the 1960s by the great theoretical physicist Hiroshi Umezawa to whom the book is dedicated. Both quantum physics for sub-microscopic constituents of brain cells and tissues and classical physics for the microscopic and macroscopic constituents are simultaneously justified by this theory. It poses an alternative to the dominant conceptions in the neuro and cognitive sciences which take neurons organized into networks as the basic constituents of the brain. Certain physical substrates in the brain are shown to support quantum field phenomena and the resulting strange quantum properties are used to explain consciousness and memory. The whole of memory is stored in such a state of macroscopic order and consciousness is realized by the creation and annihilation dynamics of energy quanta of the electromagnetic field and molecular fields of water and protein. This change of perspective results in a radically new vision of how the brain functions. Series A/B

**Einstein and the Changing Worldviews of Physics** Christoph Lehner, Jürgen Renn, Matthias Schemmel, 2012-02-02 This volume reviews conceptual conflicts at the foundations of physics now and in the past century. The focus is on the conditions and consequences of Einstein's pathbreaking achievements that sealed the decline of the classical notions of space, time, radiation, and matter and resulted in the theory of relativity. Particular attention is paid to the implications of conceptual conflicts for scientific views of the world at large, thus providing the basis for a comparison of the demise of the mechanical worldview at the turn of the 20th century with the challenges presented by cosmology at the turn of the 21st century. Throughout the work, Einstein's contributions are

not seen in isolation but instead set into the wider intellectual context of dealing with the problem of gravitation in the twilight of classical physics the investigation of the historical development is carried out with a number of epistemological questions in mind concerning in particular the transformation process of knowledge associated with the changing worldviews of physics

**The World View of Contemporary Physics** Richard F. Kitchener, 1988-07-08 Although early twentieth century physics produced two revolutionary new conceptions of the nature of the physical universe relativity theory and quantum theory more recent developments in the physical sciences have made it imperative for physicists to re-examine the older world view of physics and the assumptions upon which it was based However theorizing about the nature and status of reality has been the province of philosophers for centuries Philosophers trained in metaphysics provided a different perspective for viewing and a unique method for solving some of these problems Ideally therefore both philosophers and physicists should work together in dialogue fashion on this important issue These two groups come together for the first time in this book to examine the questions What is the world view of contemporary physics Does it need a new metaphysics If so what kind of metaphysics does it need Internationally known scholars including Ilya Prigogine and Fritjof Capra who are recognized as experts in this interdisciplinary field address such related topics as the nature of the mind our place in society and the nature of ethics

**History of Western Philosophy from a Perspective of Quantum Theory** Shiro ISHIKAWA, 2023-05-22 Recently I proposed Quantum Language QL as a language of dualistic and idealistic science which is also characterized as a linguistic turn of quantum mechanics QL has two subclasses non commutative QL and commutative QL They are applicable to quantum systems and to classical systems respectively QL is composed of Axiom 1 measurement Axiom 2 causality and the linguistic Copenhagen interpretation This theory has a stronger descriptive power than quantum mechanics and statistics Axioms 1 and 2 are usual since they are operator algebraic generalizations of quantum mechanics On the other hand the part of linguistic Copenhagen interpretation is not usual This is defined by a rule for drawing a line between science and pseudoscience For example the Popper's falsifiability is one of the rules of the linguistic Copenhagen interpretation Other examples are 1 There exists only one and not many due to Parmenides Measurement can only be done once A state does not move 2 There is no motion due to Parmenides A state does not move 3 There is only the present due to Augustinus There is no tense 4 To be is to be perceived due to Berkeley Nothing can be said without measurement It is surprising that philosophers who did not know quantum mechanics approached the Copenhagen interpretation as described above Thus I consider that the Copenhagen Interpretation is not attached to quantum mechanics but to quantum language I will show that QL is a scientific perfection of dualistic idealism in Western philosophy In fact the following unsolved problems in Western philosophy can be solved only by QL not by statistics Zeno paradoxes the problem of universals Descartes problem mind body problem subjectivity problem the Leibniz-Clarke space-time correspondence Hume's problem of induction the Grue paradox From Kantian synthesis to QL synthesis the brain in a vat Hempel's flagpole problem the black raven

problem Wittgenstein's problem Why does logic work in our world etc The most fundamental theories in modern science are commonly said to be the three theory of relativity quantum mechanics and statistics However as this book will show commutative QL is more powerful and beautiful than statistics Therefore I would replace the above three by theory of relativity quantum mechanics and commutative QL *La science et le monde moderne d'Alfred North Whitehead?* François Beets, Michel Dupuis, Michel Weber, 2013-05-02 The second international Chromatiques whiteheadiennes conference was devoted exclusively to the exegesis and contextualization of Whitehead's Science and the Modern World 1925 In order to elucidate the meaning and significance of this epoch making work the Proceedings are designed to form companion volume With one paper devoted to each of its thirteen chapters the Proceedings aim on the one hand to identify the specific contribution of each chapter to Whitehead's own research program that is to say to put its categories into perspective by means of an internal analysis and on the other hand to identify its global impact in the history of ideas **Physics and Our View of the World** Jan Hilgevoord, Praemium Erasmianum Foundation, 1994-11-03 An examination of the claims of modern physics and their impact on our view of the world Beyond the Brain Stanislav Grof, 1985-08-01 Beyond the Brain seriously challenges the existing neurophysiological models of the brain After three decades of extensive research on those non ordinary states of consciousness induced by psychedelic drugs and by other means Grof concludes that our present scientific world view is as inadequate as many of its historical predecessors In this pioneering work he proposes a new model of the human psyche that takes account of his findings Grof includes in his model the recollective level or the reliving of emotionally relevant memories a level at which the Freudian framework can be useful Beyond that is perinatal level in which the human unconscious may be activated to a reliving of biological birth and confrontation with death How birth experience influences an individual's later development is a central focus of the book The most serious challenge to contemporary psychoanalytic theory comes from a delineation of the transpersonal level or the expansion of consciousness beyond the boundaries of time and space Grof makes a bold argument that understanding of the perinatal and transpersonal levels changes much of how we view both mental illness and mental health His reinterpretation of some of the most agonizing aspects of human behavior proves thought provoking for both laypersons and professional therapists Nature Sir Norman Lockyer, 1921 **Rutherford and Physics at the Turn of the Century** Mario Bunge, William R.
