Virtual Reflections:

High-Quality Illumination of Virtual Objects Based on an Environment Estimation in Mixed Reality Applications Tobias Schwandt, 2021-08-30 Visualizations of virtual objects in the real environment is often done by a simplified representation with simple surfaces and without reference to the surrounding environment The seamless fusion of the virtual and real environment is however an essential factor in many areas which is of particular importance when calculating lighting in mixed realities on mobile devices Current approaches focus on approximations which allow the calculation of diffuse lighting whereby the rendering of glossy reflection properties is often neglected The aim of this book is to enable the visualization of mirror like reflective surfaces in mixed reality In order to achieve this goal various approaches are explored enabling high quality visualization of virtual objects in realtime with a focus on the use of common hardware such as cameras sensors in mobile devices and partially depth sensors Complete ambient lighting can be estimated which enables detailed reflections The results provide a novel way to embed complex and simple geometric shapes with glossy surfaces in the real world which offers a higher level of detail in the reflections without using additional hardware **The Virtual Studio** Moshe Moshkovitz, 2000 While virtual studio technology is revolutionary it is also linked to existing T V studio equipment and must function as an integral part of it The first comprehensive overview of virtual studio technology and its practical applications in broadcast stations this book provides a technical overview of each of the main systems on the market the kinds of programming that are best suited to it and specific details on its integration into the broadcast station and the production process itself A companion CD ROM demonstrates typical and interesting virtual studio productions *Proceedings of the EAA Joint Symposium on Auralization and Ambisonics 2014* Weinzierl, Stefan , Vorländer, Michael , Zotter, Franz, Maempel, Hans-Joachim , Lindau, Alexander , 2014 In consideration of the remarkable intensity of research in the field of Virtual Acoustics including different areas such as sound field analysis and synthesis spatial audio technologies and room acoustical modeling and auralization it seemed about time to organize a second international symposium following the model of the first EAA Auralization Symposium initiated in 2009 by the acoustics group of the former Helsinki University of Technology now Aalto University Additionally research communities which are focused on different approaches to sound field synthesis such as Ambisonics or Wave Field Synthesis have in the meantime moved closer together by using increasingly consistent theoretical frameworks Finally the quality of virtual acoustic environments is often considered as a result of all processing stages mentioned above increasing the need for discussions on consistent strategies for evaluation Thus it seemed appropriate to integrate two of the most relevant communities i e to combine the 2nd International Auralization Symposium with the 5th International Symposium on Ambisonics and Spherical Acoustics The Symposia on Ambisonics initiated in 2009 by the Institute of Electronic Music and Acoustics of the University of Music and Performing Arts in Graz were traditionally dedicated to problems of spherical sound field analysis and re synthesis strategies for the exchange of ambisonics encoded

audio material and more than other conferences in this area the artistic application of spatial audio systems This publication contains the official conference proceedings It includes 29 manuscripts which have passed a 3 stage peer review with a board of about 70 international reviewers involved in the process Each contribution has already been published individually with a unique DOI on the DepositOnce digital repository of TU Berlin Some conference contributions have been recommended for resubmission to Acta Acustica united with Acustica to possibly appear in a Special Issue on Virtual Acoustics in late 2014 These are not published in this collection
