Structural Modeling and Analysis Clive L. Dym, 1997-06-13 A modern unified introduction to structural modelling and analysis with an emphasis on the application of energy methods

**Structural Modeling and Experimental Techniques, Second Edition** Harry G. Harris, Gajanan Sabnis, 1999-03-30 Structural Modeling and Experimental Techniques presents a current treatment of structural modeling for applications in design research education and product development Providing numerous case studies throughout the book emphasizes modeling the behavior of reinforced and prestressed concrete and masonry structures Structural Modeling and Experimental Techniques Concentrates on the modeling of the true inelastic behavior of structures Provides case histories detailing applications of the modeling techniques to real structures Discusses the historical background of model analysis and similitude principles governing the design testing and interpretation of models Evaluates the limitations and benefits of elastic models Analyzes materials for reinforced concrete masonry and steel models Assesses the critical nature of scale effects of model testing Describes selected laboratory techniques and loading methods Contains material on errors as well as the accuracy and reliability of physical modeling Examines dynamic similitude and modeling techniques for studying dynamic loading of structures Covers actual applications of structural modeling This book serves students in model analysis and experimental methods professionals manufacturing and testing structural models as well as professionals testing large or full scale structures since the instrumentation techniques and overall approaches for testing large structures are very similar to those used in small scale modeling work

**Latent Variable Modeling and Applications to Causality** Maia Berkane, 2012-12-06 This volume gathers refereed papers presented at the 1994 UCLA conference on Latent Variable Modeling and Application to Causality The meeting was organized by the UCLA Interdivisional Program in Statistics with the purpose of bringing together a group of people who have done recent advanced work in this field The papers in this volume are representative of a wide variety of disciplines in which the use of latent variable models is rapidly growing The volume is divided into two broad sections The first section covers Path Models and Causal Reasoning and the papers are innovations from contributors in disciplines not traditionally associated with behavioural sciences e.g computer science with Judea Pearl and public health with James Robins Also in this section are contributions by Rod McDonald and Michael Sobel who have a more traditional approach to causal inference generating from problems in behavioural sciences The second section encompasses new approaches to questions of model selection with emphasis on factor analysis and time varying systems Amemiya uses nonlinear factor analysis which has a higher order of complexity associated with the identifiability conditions Muthen studies longitudinal hierarchical models with latent variables and treats the time vector as a variable rather than a level of hierarchy Deleeuw extends exploratory factor analysis models by including time as a variable and allowing for discrete and ordinal latent variables Arminger looks at autoregressive structures and Bock treats factor analysis models for categorical data
