Makman, George B. Stefano, 1993 Aging and its associated problems are of increasing interest and concern as the life expectancy of the human population increases The importance of continued functioning of the nervous system in cognitive and integrative processes necessary for maintaining the quality of life during aging is self evident The nature and extent of the changes that occur with increasing age differ considerably in different species and also in the various organs or tissues within a given species emphasis on normal aging as it applies to the nervous systems of man and other mammals as well as to certain invertebrates Changes in human brain function due to Alzheimer s disease are considered in addition to

changes that may occur with normal human aging The potential involvement of immunocytes in age associated disorders is also discussed nervous system generally due to aging from molecular pharmacological electrophysiological and behavioral perspectives This book emphasizes the attempts of recent research to understand the basic mechanisms for these changes as well as their functional consequences and provides important insight into our understanding of the aging process and the consequences of these changes for neuronal function Topics considered include neuropeptides systems in aging including opioids and analgesic cholinergic and aminergic systems neuroendocrinology and neuroimmunology The Frequency-Following Response Nina Kraus, Samira Anderson, Travis White-Schwoch, Richard R. Fay, Arthur N. Popper, 2017-01-09 This volume will cover a variety of topics including child language development hearing loss listening in noise statistical learning poverty auditory processing disorder cochlear neuropathy attention and aging It will appeal broadly to auditory scientists and in fact any scientist interested in the biology of human communication and learning The range of the book highlights the interdisciplinary series of questions that are pursued using the auditory frequency following response and will accordingly attract a wide and diverse readership while remaining a lasting resource for the field Nutrition and the Chemical Senses in Aging Claire Murphy, William S. Cain, David Mark Hegsted, 1989 **The Handbook of Aging and Cognition** Fergus I. M. Craik, Timothy A. Salthouse, 2008 Cognitive aging is a flourishing area of research This third edition reviews the findings and theories since the previous edition and evaluates the field's points of growth Multisensory and sensorimotor interactions in speech perception Kaisa Tiippana, Jean-Luc Schwartz, Riikka Möttönen, 2015-06-26 Speech is multisensory since it is perceived through several senses Audition is the most important one as speech is mostly heard The role of vision has long been acknowledged since many articulatory gestures can be seen on the talker's face Sometimes speech can even be felt by touching the face The best known multisensory illusion is the McGurk effect where incongruent visual articulation changes the auditory percept The interest in the McGurk effect arises from a major general question in multisensory research How is information from different senses combined Despite decades of research a conclusive explanation for the illusion remains elusive This is a good demonstration of the challenges in the study of multisensory integration Speech is special in many ways It is the main means of human communication and a manifestation of a unique language system It is a signal with which all humans have a lot of experience We are exposed to it from birth and learn it through development in face to face contact with others It is a signal that we can both perceive and produce The role of the motor system in speech perception has been debated for a long time Despite very active current research it is still unclear to which extent and in which role the motor system is involved in speech perception Recent evidence shows that brain areas involved in speech production are activated during listening to speech and watching a talker's articulatory gestures Speaking involves coordination of articulatory movements and monitoring their auditory and somatosensory consequences How do auditory visual somatosensory and motor brain areas interact during speech perception How do these sensorimotor

interactions contribute to speech perception It is surprising that despite a vast amount of research the secrets of speech perception have not yet been solved The multisensory and sensorimotor approaches provide new opportunities in solving them Contributions to the research topic are encouraged for a wide spectrum of research on speech perception in multisensory and sensorimotor contexts including novel experimental findings ranging from psychophysics to brain imaging theories and models reviews and opinions Amplitude Modulated Auditory Steady-state Responses in Older Listeners Elizabeth D. Leigh,2003 **The Encyclopedia of Aging** ,2001 Work contains many cross references and an extensive bibliography **Encyclopedia of Aging: Ear-Kin** ,2002 **Changes in Mental Traits with Age Determined by Annual Re-tests** Fowler Dell Brooks,1921 **Rehabilitative Audiology** Raymond H. Hull,1982 Building Age ,1925 **Thresholds in aging : the 1984 Sandoz Lectures in Gerontology** Manfred Bergener,1985 Building Age and National Builder ,1929 *Building Age and the Builders' Journal* ,1923 *Archives of Otolaryngology* ,1929
