## **Topics In Multidimensional Linear Systems Theory:**

**Topics in Multidimensional Linear Systems Theory** Eva Zerz, 2000-08-16 The past few decades have witnessed an increasing interest in the field of multidimensional systems theory This is concerned with systems whose trajectories depend not on one single variable usually interpreted as time or frequency but on several independent variables such as the coordinates of an image The behavioural approach introduced by J C Willems provides a particularly suitable framework for developing a linear systems theory in several variables The book deals with the classical concepts of autonomy controllability observability and stabilizability All the tests and criteria given are constructive in the sense that algorithmic versions may be implemented in modern computer algebra systems using Gröbner basis techniques There is a close connection between multidimensional systems theory and robust control of one dimensional systems with several uncertain parameters The central link consists in the basic tool of linear fractional transformations The book concludes with examples from the theory of electrical networks

Gilliam, 2012-12-06 Mathematical systems theory is a vibrant research area in its own right The theory has an impact in numerous applications areas including aeronautics biological systems chemical engineering communication systems financial engineering and robotics to name just a few This volume contains survey and research articles by some of the leading researchers in mathematical systems theory Many authors have taken special care that their articles are self contained and accessible also to non specialists The articles contained in this volume are from those presented as plenary lectures invited one hour lectures and minisymposia at the 15th International Symposium on the Mathematical Theory of Networks and Systems held at the University of Notre Dame August 12-16 2002

**Mathematical Systems Theory I** Diederich Hinrichsen, Anthony J. Pritchard, 2011-08-03 This book presents the mathematical foundations of systems theory in a self contained comprehensive detailed and mathematically rigorous way It is devoted to the analysis of dynamical systems and combines features of a detailed introductory textbook with that of a reference source The book contains many examples and figures illustrating the text which help to bring out the intuitive ideas behind the mathematical constructions

Interpolation and Realization Theory with Applications to Control Theory Vladimir Bolotnikov, Sanne ter Horst, André C.M. Ran, Victor Vinnikov, 2019-04-08 This volume is devoted to Joseph A Joe Ball s contributions to operator theory and its applications and in celebration of his seventieth birthday Joe Ball s career spans over four and a half decades starting with his work on model theory and related topics for non contractions and operators on multiply connected domains Later on more applied operator theory themes appeared in his work involving factorization and interpolation for operator valued functions with extensive applications in system and control theory He has worked on

nonlinear control time varying systems and more recently on multidimensional systems and noncommutative H theory on the unit ball and polydisk and more general domains and these are only the main themes in his vast oeuvre Fourteen research papers constitute the core of this volume written by mathematicians who have collaborated with Joe or have been influenced by his vast mathematical work A curriculum vitae a publicationslist and a list of Joe Ball s PhD students are included in this volume as well as personal reminiscences by colleagues and friends Contributions by Yu M Arlinskii S Hassi M Augat J W Helton I Klep S McCullough S Balasubramanian U Wijesooriya N Cohen Q Fang S Gorai J Sarkar G J Groenewald S ter Horst J Jaftha A C M Ran M A Kaashoek F van Schagen A Kheifets Z A Lykova N J Young A E Ajibo R T W Martin A Ramanantoanina M J Y Ou H J Woerdeman A van der Schaft A Tannenbaum T T Georgiou J O Deasy and L Norton [Mathematical Reviews](#),2007

**The Diversity and Beauty of Applied Operator Theory** Albrecht Böttcher, Daniel Potts, Peter Stollmann, David Wenzel,2018-04-27 This book presents 29 invited articles written by participants of the International Workshop on Operator Theory and its Applications held in Chemnitz in 2017 The contributions include both expository essays and original research papers illustrating the diversity and beauty of insights gained by applying operator theory to concrete problems The topics range from control theory frame theory Toeplitz and singular integral operators Schr dinger Dirac and Kortweg de Vries operators Fourier integral operator zeta functions C algebras and Hilbert C modules to questions from harmonic analysis Monte Carlo integration Fibonacci Hamiltonians and many more The book offers researchers in operator theory open problems from applications that might stimulate their work and shows those from various applied fields such as physics engineering or numerical mathematics how to use the potential of operator theory to tackle interesting practical problems
