Topics in Non-Gaussian Signal Processing Edward J. Wegman, Stuart C. Schwartz, John B. Thomas, 2012-12-06 Non Gaussian Signal Processing is a child of a technological push It is evident that we are moving from an era of simple signal processing with relatively primitive electronic circuits to one in which digital processing systems in a combined hardware software configuration are quite capable of implementing advanced mathematical and statistical procedures Moreover as these processing techniques become more sophisticated and powerful the sharper resolution of the resulting system brings into question the classic distributional assumptions of Gaussianity for both noise and signal processes This in turn opens the door to a fundamental reexamination of structure and inference methods for non Gaussian stochastic processes together with the application of such processes as models in the context of filtering estimation detection and signal extraction Based on the premise that such a fundamental reexamination was timely in 1981 the Office of Naval Research initiated a research effort in Non Gaussian Signal Processing under the Selected Research Opportunities Program

Advanced Signal Processing Handbook Stergios Stergiopoulos, 2017-09-08 Advances in digital signal processing algorithms and computer technology have combined to produce real time systems with capabilities far beyond those of just few years ago Nonlinear adaptive methods for signal processing have emerged to provide better array gain performance however they lack the robustness of conventional algorithms The challenge remains to develop a concept that exploits the advantages of both a scheme that integrates these methods in practical real time systems The Advanced Signal Processing Handbook helps you meet that challenge Beyond offering an outstanding introduction to the principles and applications of advanced signal processing it develops a generic processing structure that takes advantage of the similarities that exist among radar sonar and medical imaging systems and integrates conventional and nonlinear processing schemes

Engineering Approaches to Study Cardiovascular Physiology: Modeling, Estimation, and Signal Processing Riccardo Barbieri,Zhe Chen, With cardiovascular diseases being one of the main causes of death in the world quantitative modeling assessment and monitoring of the cardiovascular control system plays a critical role in bringing important breakthroughs to cardiovascular care Quantification of cardiovascular physiology and its control dynamics from physiological recordings and by use of mathematical models and algorithms has been proved to be of important value in understanding the causes of cardiovascular diseases and assisting the prognostic or diagnostic process Nowadays development of new recording technologies e g electrophysiology imaging ultrasound etc has enabled us to improve and expand acquisition of a wide spectrum of physiological measures related to cardiovascular control An emerging challenge is to process and interpret such increasing amount of information by using state of the art approaches in systems modeling estimation and control and signal processing which would lead to further insightful scientific findings In particular multi disciplinary engineering empowered approaches of studying cardiovascular systems would greatly deepen our understanding of cardiovascular functions e g heart rate variability baroreflex sensitivity and autonomic control as it would also improve the knowledge about heart pathology cardiovascular rehabilitation and therapy Meanwhile developing cardiovascular biomedical devices or heart machine interface for either clinical monitoring or rehabilitation purpose is of greater and greater interest for both scientific advancement and potential medical benefits This Research Topic will bring together established experts whose areas of research cover a wide range of studies and applications Contributions include but are not limited to state of the art modeling methodologies algorithmic development in signal processing and estimation as well as applications in cardiovascular rehabilitation and clinical monitoring The Research Topic will consider both invited reviews and original research

Modern Spectrum Analysis of Time Series Prabhakar S. Naidu,1995-10-25 Spectrum analysis can be considered as a topic in statistics as well as a topic in digital signal processing DSP This book takes a middle course by emphasizing the time series models and their impact on spectrum analysis The text begins with elements of probability theory and goes on to

introduce the theory of stationary stochastic processes The depth of coverage is extensive Many topics of concern to spectral characterization of Gaussian and non Gaussian time series scalar and vector time series are covered A section is devoted to the emerging areas of non stationary and cyclostationary time series The book is organized more as a textbook than a reference book Each chapter includes many examples to illustrate the concepts described Several exercises are included at the end of each chapter The level is appropriate for graduate and research students
