

Psychology 211 – Stats in Behavioral Sciences Introduction

Two types of statistics:

- **Descriptive statistics** – Describes/summarizes data (Sarah was correct on average 87.5% of the time).
- **Inferential statistics** – Makes an inference/draws conclusions about data (Sarah's performance was significantly different from chance).

Can Chimpanzees solve problems?

- **Question** - "To what extent does the chimpanzee comprehend the elements of a problem situation and potential solutions?"
- **Participant** – Sarah, 14-year-old female chimp
- **Method** - Watched eight 30 second videos of a human experiencing some problem • Told to choose the photo showing the problem solution (out of 2 choices).

How did Sarah do?

- First attempt got 7 out of 8 problem-solutions correct.
- The **null hypothesis (H_0)** says that she was guessing and got lucky
- The **alternative hypothesis (H_1)** says that she actually solved the problems.

Which one do we believe more?

Analogy:

If Sarah were guessing, it would be like flipping a coin **8 times**; in other words it would be like flipping a coin **8 times and getting head 7 out of the 8 tosses**.

Suppose Sarah had gotten 14/16 correct –

- Inferential statistics: probability of 7 or more out of 8 = **3.5%**
- Probability of 14 or more out of 16 = **0.2%**

How can stats help us?

Statistics can help us answer interesting questions such as:

- Do chimpanzees problem-solve?
- How much do people give in to peer pressure?
- How does language affect eye witness testimony?
- Does caffeine improve test performance?

Understanding Stats In The Behavioral Sc:

Understanding Statistics in the Behavioral Sciences Roger Bakeman, Byron F. Robinson, 2005-03-23 Understanding Statistics in the Behavioral Sciences is designed to help readers understand research reports analyze data and familiarize themselves with the conceptual underpinnings of statistical analyses used in behavioral science literature The authors review statistics in a way that is intended to reduce anxiety for students who feel intimidated by statistics Conceptual underpinnings and practical applications are stressed whereas algebraic derivations and complex formulas are reduced New ideas are presented in the context of a few recurring examples which allows readers to focus more on the new statistical concepts than on the details of different studies The authors selection and organization of topics is slightly different from the ordinary introductory textbook It is motivated by the needs of a behavioral science student or someone in clinical practice rather than by formal mathematical properties The book begins with hypothesis testing and then considers how hypothesis testing is used in conjunction with statistical designs and tests to answer research questions In addition this book treats analysis of variance as another application of multiple regression With this integrated unified approach students simultaneously learn about multiple regression and how to analyze data associated with basic analysis of variance and covariance designs Students confront fewer topics but those they do encounter possess considerable more power generality and practical importance This integrated approach helps to simplify topics that often cause confusion Understanding Statistics in the Behavioral Sciences features Computer based exercises many of which rely on spreadsheets help the reader perform statistical analyses and compare and verify the results using either SPSS or SAS These exercises also provide an opportunity to explore definitional formulas by altering raw data or terms within a formula and immediately see the consequences thus providing a deeper understanding of the basic concepts Key terms and symbols are boxed when first introduced and repeated in a glossary to make them easier to find at review time Numerous tables and graphs including spreadsheet printouts and figures help students visualize the most critical concepts This book is intended as a text for introductory behavioral science statistics It will appeal to instructors who want a relatively brief text The book s active approach to learning works well both in the classroom and for individual self study
