Computational Methods for Time-Series Analyses in Earth Sciences Silvio José Gumiere, Hossein Bonakdari, 2025-06-27
Computational Methods for Time Series Analyses in Earth Sciences bridges the gap between theoretical knowledge and practical application offering a deep dive into the utilization of R programming for managing analyzing and forecasting time series data within the realm of Earth sciences It systematically unfolds the layers of data manipulation graphical representation and sampling to prepare the reader for complex analyses and predictive modeling from the basics of signal processing to the nuances of machine learning It presents cutting edge techniques such as neural networks kernel based methods and evolutionary algorithms specifically tailored to tackle challenges and provides practical case studies to aid readers with utilizing the techniques covered Computational Methods for Time Series Analyses in Earth Sciences is a valuable resource for scientists researchers and students delving into the intricacies of Earth s environmental patterns and cycles through the lens of computational analysis and guides readers through various computational approaches to deciphering spatial and temporal data Focuses on the use of R for time series analysis and the application of these methods directly to Earth and environmental datasets Integrates Machine Learning techniques enabling readers to explore advanced computational methods for forecasting and modeling Includes case studies with real world applications providing readers with examples on how to translate computational skills into tangible outcomes *Essential Python for the Physicist* Giovanni Moruzzi, 2020-06-02 This book introduces the reader with little or no previous computer programming experience to the Python programming language of interest for a physicist or a natural sciences student The book starts with basic interactive Python in order to acquire an introductory familiarity with the language than tackle Python scripts programs of increasing complexity that the reader is invited to run on her his computer All program listings are discussed in detail and the reader is invited to experiment on what happens if some code lines are modified The reader is introduced to Matplotlib graphics for the generation of figures representing data and function plots and for instance field lines Animated function plots are also considered A chapter is dedicated to the numerical solution of algebraic and transcendental equations the basic mathematical principles are discussed and the available Python tools for the solution are presented A further chapter is dedicated to the numerical solution of ordinary differential equations This is of vital importance for the physicist since differential equations are at the base of both classical physics Newton s equations and quantum mechanics Schroedinger s equation The shooting method for the numerical solution of ordinary differential equations with boundary conditions at two boundaries is also presented Python programs for the solution of two quantum mechanics problems are discussed as examples Two chapters are dedicated to Tkinter graphics which gives the user more freedom than Matplotlib and to Tkinter animation Programs displaying the animation of physical problems involving the solution of ordinary differential equations for which in most cases there is no algebraic solution in real time are presented and discussed Finally 3D animation is
